AMC shall have an appropriate Liquidity Risk Management (LRM) Model at scheme level, approved by Trustees, to ensure that reasonable liquidity requirements are adequately provided for. Recourse to ISTs for managing liquidity will only be taken after the following avenues for raising liquidity have been attempted and exhausted:

- I. Use of scheme cash & cash equivalent
- II. Use of market borrowing
- III. Selling of scheme securities in the market
- IV. After attempting all the above, if there is still a scheme level liquidity deficit, then out of the remaining securities, outward ISTs of the optimal mix of low duration paper with highest quality shall be effected.

The use of market borrowing before ISTs will be optional and Fund Manager may at his discretion take decision on

borrowing in the best interest of unitholders. In case option of market borrowing and/or selling of security is not used, the reason for the same shall be recorded with evidence.

b) For Duration/ Issuer/ Sector/ Group rebalancing

- I. ISTs shall be allowed only to rebalance the breach of regulatory limit.
- II. ISTs can be done where any one of duration, issuer, sector and group balancing is required in both the transferor and transferee schemes. Different reasons cannot be cited for transferor and transferee schemes except in case of transferee schemes is being a Credit Risk scheme.
- III. In order to guard against possible mis-use of ISTs in Credit Risk scheme, Trustees shall ensure to have a mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in process of ISTs in Credit Risk scheme, in case the security becomes default grade after the ISTs within a period of one year. Such negative impact on performance shall mirror the existing mechanism for performance incentives of the AMC.

No ISTs of a security shall be allowed, if there is negative news or rumors in the mainstream media or an alert is generated about the security, based on internal credit risk assessment in terms Para 4.3 of SEBI Master Circular for Mutual Funds dated May 19, 2023 during the previous four months.

If security gets downgraded following ISTs, within a period of four months, Fund Manager of buying scheme has to provide detailed justification /rationale to the Trustees for buying such security.

AMC shall ensure that Compliance Officer, Chief Investment Officer and Fund Managers of transferor and transferee schemes have satisfied themselves that ISTs undertaken are in compliance with the regulatory requirements. All documentary evidence and required Template in this regard shall be maintained by the AMC for all ISTs.

C. WHAT ARE THE INVESTMENT STRATEGIES?

Investment Strategy:

The Scheme is an actively managed Scheme.

The Fund provides investors with a portfolio which invests in stocks with large market capitalisation. Large Cap Stocks are an ideal investment choice on account of the following relative advantages: -

- Market leaders – Large cap companies act as catalyst for the country's economic growth and gain the most from an economic upturn and hence are a good proxy for the country's growth.
- Economies of scale – Large cap companies benefit from cost efficiency with lower per unit overhead costs due to their large-scale operations and are thus able to offer competitive pricing leading to both higher top line and bottom line growth.
- Access to raise resources – Companies with large capitalisation have strong Balance Sheets along with the ability to raise/borrow large capital. They also have easy access to international markets for raising capital. Another advantage is that their cost of borrowing is lesser for both domestic and overseas borrowings.
- Diversification – A diversified portfolio of a Large Cap fund can be achieved by investing in large caps across Value Chain, Products (Brands), Market Segments and Geographic Locations, which helps in neutralising the impact of a downturn in any segment.
- Risk Taking Ability – Large Cap companies have resources to tap virgin markets, introduce niche products and technologies. They can command premium on niche as well as new product introductions and also could be market leaders. On the operational side, they have access to sophisticated information systems and use superior risk management systems. Thus, with their deeper pockets, their risk taking ability is higher.
- Preference given by Institutional Investors – Large Cap companies are the preferred stocks for long-term investments for large institutional investors like Insurance Companies, Provident Funds (both domestic and foreign) etc. Also Global Venture Funds and Foreign Institutional Investors look for a certain minimum market cap for considering investments, which is normally satisfied only by Large Caps. Large Caps are also benefited by global cross border operations, which in turn improve the visibility of their stock.

Procedure followed for investment decisions:

The Fund Manager of the Scheme is responsible for making buy / sell decisions for the Scheme's portfolio and seeks to develop a well-diversified portfolio taking into account the asset allocation patterns of other schemes along with risks that are associated with such investments. The investment decisions are made on an ongoing basis keeping in view the market conditions and other regulatory aspects.

The AMC has constituted an Investment Committee, currently comprising of the CEO, COO, Head of Risk Management, Head of Equities and Head of Fixed Income that meets at periodic intervals. The Investment Committee's role is to formulate broad investment strategies for the Scheme, review the performance of the Scheme and the general market outlook.

The Fund Manager is responsible for facilitating investment debate and a robust investment culture. The investment team would hold ongoing meetings as well as additional ad-hoc meetings as needed, to explore the investment thesis.

It is the responsibility of the AMC to seek to ensure that the investments are made as per the Regulatory guidelines, the investment objective of the Scheme and in the interest of the Unit holders of the Scheme.

The AMC will keep a record of all investment decisions in accordance with the guidelines issued by SEBI.

The AMC and Trustees will review the performance of the scheme in their Board meetings. The performance would be compared with the performance of the benchmark index and with peer group in the industry.

Exposure to Derivatives:

Losses may arise as a result of using derivatives, but these are likely to be compensated by the gains on the underlying cash instruments held by the Scheme.

For detailed derivative strategies, please refer to SAI.

Underwriting:

The scheme will not accept underwriting and sub underwriting obligations.

Stock/Securities Lending by the Fund:

The Fund may in future carry out stock/securities lending activity under any of its Schemes, in order to augment its income. Stock/securities lending may involve the risk of default such as loss, bankruptcy etc. on the part of the borrower. However, this is unlikely to happen if the stock/securities lending is carried out for stocks/securities which are in dematerialized form and through an authorized stock/securities lending Scheme which is subject to appropriate regulation. Any stock/securities lending done by the Scheme shall be in accordance with any regulations or guidelines regarding the same. The policy to be followed for stock/securities lending shall be approved by the Board of Directors of the Investment Manager as well as by the Board of Trustees.

Portfolio Turnover Policy:

Purchase and Sale of securities attract transaction costs of the nature of brokerage, stamp duty, custodian transaction charges etc. The portfolio turnover is essential to regularly explore trading opportunities to optimize returns for the Scheme and enable portfolio restructuring when required.

The Scheme will manage its portfolio taking into account the associated risks (such as interest / liquidity / redemption etc.) perceived / expected, so as to mitigate the risks by using adequate risk management techniques. The portfolio turnover policy will be aimed at enhancing the returns/growth.

The Scheme is open ended, with subscriptions and redemptions expected on a daily basis, resulting in net inflow/outflow of funds, and on account of the various factors that affect portfolio turnover; it is difficult to give an estimate, with any reasonable amount of accuracy. Therefore, the Scheme has no specific target relating to portfolio turnover.

Pursuant to Schedule IX read with Regulation 50 of the SEBI (Mutual Funds) Regulations, 1996, the cost of investments acquired or purchased shall include all such costs incurred for effecting the transaction while the sale proceeds of investment sold or redeemed shall be net of all such costs incurred for effecting the sale transactions and shall form part of the purchase or the sale value of investments.

Risk Mitigation:

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in portfolio construction process. Stock specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the AMC.

Through adequate diversification of the portfolio, the AMC tries to reduce the risk. Diversification will also be achieved by spreading the investments over a diverse range of industries / sectors. The Scheme, generally does not intend investing in illiquid and unlisted equity related securities. However, if the case merits, the Scheme may invest in such securities adhering to prudential norms on a case to case basis. The investments may be made in primary as well as secondary markets and the portfolio will be adequately diversified.

The Scheme being open ended, some portion of the portfolio may be invested in Money Market Instruments so as to meet the normal repurchase requirements. The remaining investment will be made in securities which are either

expected to be reasonably liquid or of varying maturity. However, the NAV of the Scheme may be affected, if the securities invested in are rendered illiquid after investment.

In addition, the Investment Manager will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The Investment Manager would use this analysis to assess the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

The Scheme may use derivatives instruments like Stock/ Index Futures or Options, Interest Rate Futures, Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging or portfolio balancing or any other purpose as allowed under the regulations, within the permissible limit of the portfolio, which may be increased as permitted under the Regulations and guidelines from time to time.

As a prudent measure, the AMC has broad internal investment norms and investments made through the scheme would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Benchmark (Total Returns Index): BSE 100 TRI

The above benchmark is in accordance with Para 1.9 of SEBI Master Circular for Mutual Funds dated May 19, 2023, on ‘Guiding Principles for bringing uniformity in Benchmarks of Mutual Fund Schemes’ and the list published by AMFI in this regard on Tier 1 benchmark for equity schemes.

As approved by the Board of Directors/Trustees the Scheme has currently selected the above-mentioned benchmark for respective schemes on the basis of the Investment Pattern/Objective of the Scheme and the composition of the Index. The Investment Manager may revise the same to a more appropriate benchmark index, if any, as and when formulated by competent agencies. AMC may give its comments/perception on comparison of returns and benchmarks, if desired.

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Mutual Fund shall compute the Net Asset Value (NAV) of each scheme in accordance with SEBI (Mutual Funds) Regulations, 1996. The NAV of the Scheme shall be calculated on all business days.

The computation of NAV, valuation of securities / assets, accounting policies and standards would be in conformity with the SEBI (Mutual Funds) Regulations, 1996 and guidelines issued from time to time

The NAV per unit under the Scheme shall be calculated as follows:

$\frac{\text{Market or Fair Value of Scheme's investments} + \text{Current assets (including accrued income)} - \text{Current Liabilities and Provisions (including accrued expenses)}}{\text{No. of Units outstanding under the Scheme}} = \text{NAV (Rs.)}$

The price arrived shall be rounded off up to four decimals. AMC reserves the right to calculate NAV more than four decimal places.

An Illustration:

Assume that the Market or Fair Value of Scheme's investments is Rs. 1,00,00,000; Current asset of the scheme is Rs.25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the scheme are 5,00,000.

Thus, the NAV will be calculated as:

$$\text{NAV} = \frac{1,00,00,000 + 25,00,000 - 15,00,000}{5,00,000}$$

Therefore, the NAV of the scheme is Rs. 22.0000

The repurchase price of an open ended scheme shall not be lower than 95% of the NAV.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

I. Introduction

A. **Definitions/interpretation**

In this Scheme Information Document, the words and expressions shall have the meaning specified in the following link, unless the context otherwise requires.

B. **Risk Factors**

Scheme Specific Risk Factors:

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

I. Risks associated with investment in Equity and Equity related instruments:

Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted Securities may be affected if they have to be sold prior to the target date for divestment. All investments involve risks and there can be no guarantee against loss resulting from an investment in any share of the Scheme, nor is there any assurance that the Scheme's investment objective will be attained in respect of its overall performance. In certain circumstances the right of the investors of the Scheme may be suspended. Consequently, the NAVs of units issued under the Scheme may be adversely affected.

Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities including debt securities, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law / policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual Securities, a specific sector or all sectors. Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.

The Fund Manager of the Scheme may invest in the Securities of smaller, lesser-known companies. These investments may involve greater risk and the possibility of greater portfolio price volatility than investing in larger, more mature or better-known firms. Amongst other reasons for the greater price volatility of Securities of small companies and unseasoned stocks are the less certain growth prospects of smaller firms, the lower degree of liquidity of the markets for such stocks, and the greater sensitivity of small companies to changing economic conditions. For example, these companies are associated with higher investment risk than that normally associated with larger firms due to the greater business risks of small size and limited product lines, markets, distribution channels and financial and managerial resources. Such Securities, including those of newer or recently restructured companies or those which may have experienced financial difficulties, may be more volatile in price than larger capitalized stocks. Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options.

The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

The value of the Scheme investments may be affected by factors affecting capital markets generally, such as price and volume volatility in the stock markets, interest rates, currency exchange rates, foreign investments, changes in government policy, political, economic or other developments and closure of the stock exchanges.

Investment made in unlisted equity or equity-related securities may only be realisable upon listing of these securities.

Trading volumes, settlement periods and transfer procedures may restrict liquidity of investments in equity and equity related securities. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The length of the settlement may affect the Scheme in the event the Scheme has to meet large number of redemption.

II. Risks associated with investments in Fixed Income Securities:

Price-Risk or Interest - Rate Risk: Fixed income securities such as government bonds, corporate bonds and money market instruments and derivatives run price - risk or interest - rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Re - investment Risk: Investments in fixed income securities may carry re - investment risk as interest rates prevailing on the coupon payment or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio

Credit Risk: This is the risk associated with the issuer of a debenture / bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern e.g., corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively riskier than bonds, which are AAA rated.

III. Risk associated with investing in Derivatives:

As and when Schemes trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies.

The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme's original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme's portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme's returns and increase the Scheme's potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

The price at which credit default swaps trades may differ from the price of the credit default swaps' referenced security. In adverse market conditions, the basis (difference between the spread bonds and the spread of credit default swaps) can be significantly more volatile than the credit default swaps' referenced securities.

Trading in derivatives has the following risks:

- a) An exposure to derivatives in excess of the hedging requirements can lead to losses.
- b) An exposure to derivatives can also limit the profits from a genuine investment transaction.

- c) Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.
- d) **Particular Risks of Exchange Traded Derivative Transactions**
The securities exchange on which the shares of the Scheme may be listed may have the right to suspend or limit trading in all securities which it lists. Such a suspension would expose the Scheme to losses and delays in its ability to redeem shares of the Scheme.
- e) **Stock Market Fluctuations**
Investors may note that the value of their investment may fall as well as rise and they may get back less than they originally invested. The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.
- f) **Income Distribution cum Capital Withdrawal (Dividends)**
The Scheme may distribute not only investment income, but also realized capital gains or capital. Where capital is distributed, this will result in a corresponding reduction in the value of shares of the Scheme, and a reduction in the potential for long-term capital growth.
- g) **Warrants**
The Scheme may invest in warrants, the values of these warrants are likely to fluctuate more than the prices of the underlying securities because of the greater volatility of warrant prices.
- h) **Futures and Options**
The Scheme may use options and futures on securities, indices and interest rates for the purpose of efficient portfolio management. Transactions in futures and options carry a high degree of risk. A relatively small market movement will have a proportionately larger impact which may work for or against the investor. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.
- i) **Listing**
In case the shares of the Scheme are listed, the exchanges on which those shares are listed will have no responsibility for the contents of any prospectus issued by the Scheme or will make no representations as to its accuracy or completeness and expressly disclaim any liability whatsoever for any kind of loss arising from or in reliance upon any part of any such prospectus.

IV. Risks associated with investing in Tri Party Repo through CCIL (TREPS):

All the market repo and Tri-party repo, are settled through Clearing Corporation of India Limited (CCIL). CCIL acts as a Central Counterparty (CCP) to all trades received for settlement.

Risk of exposure in the TREPS, Repos & Reverse Repos in Government Securities/Treasury Bills emanates mainly on two counts – Risk of failure by a lender to make funds available or by a borrower to provide adequate collateral security to accept the fund at the first leg of borrowing and lending under Tri-party Repo transaction or Repo transactions in Government Securities / treasury Bills. Risk of default by a borrower in repayment.

V. Risks Associated with investing in Money Market Instruments:

- Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's inability to meet interest and principal payments.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, the general level of market liquidity and market perception of creditworthiness of the issuer of such instruments.
- The NAV of the Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

VI. Risk associated with Securities Lending:

Securities lending may involve the risk of default on the part of the borrower. However, this is unlikely to happen if the stock lending is carried out for stocks which are in dematerialized form and through an authorized stock lending scheme, subject to appropriate Regulations. The Investment Manager perceives such situations to be exceptional in nature. Although the Stock Market in India is still developing, considering the good demand for

listed / quoted Equity Shares of reputed companies, the Scheme(s) may choose to meet repurchase needs through temporary borrowings, within the permissible limits.

VII. Risk Factors Associated with Investments in REITs and InvITs:

- **Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc. may differ from existing capital market asset classes under Indian Law.

VIII. Other Risks

In the event of substantial investment by the Sponsor/s, or its associates in the Scheme(s), any redemption by these entities may have an impact on the performance of the Scheme(s).

Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the event of winding up of the Scheme(s) or for any amendments in the tax laws that may affect the tax benefits available under the Scheme(s). The tax benefits are based on the present laws and rules in force.

Canara Robeco Bluechip Equity Fund is an open ended equity fund investing predominantly in the top 100 companies by market capitalization. The underlying companies will be more liquid and thus be less volatile as compared to a mid or a small cap companies.

IX. Risk associated with investing in Foreign Securities:

For investments in American Depository Receipts (ADRS) / Global Depository Receipts (GDRs) and such other offshore investments (as and when permitted), the market values of which depend generally on factors such as multi-currency, multi-market situations, political / economic factors and international regulations.

- **Currency Risk:** Investment in other currencies involves currency risks. The Scheme's exposure in foreign securities, income distributions etc. may be adversely affected due to change in the exchange rates of such foreign currencies in relation to Indian Rupee.
- **Interest Rate Risk:** The pace and movement of interest rate cycles of various countries can differ significantly leading to an exposure to their interest rates.
- **Credit Risk:** Though the investments in overseas securities are subject to credit risks, this is substantially reduced as investments are made only in rated securities as stipulated under the regulations.

X. Risk factors associated with Creation of Segregated Portfolio:

Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer. Security comprising of segregated portfolio may not realise any value. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not

be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

C. Risk mitigation strategies:

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in portfolio construction process. Stock specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the AMC.

Through adequate diversification of the portfolio, the AMC tries to reduce the risk. Diversification will also be achieved by spreading the investments over a diverse range of industries / sectors. The Scheme, generally does not intend investing in illiquid and unlisted equity related securities. However, if the case merits, the Scheme may invest in such securities adhering to prudential norms on a case to case basis. The investments may be made in primary as well as secondary markets and the portfolio will be adequately diversified.

The Scheme being open ended, some portion of the portfolio may be invested in Money Market Instruments so as to meet the normal repurchase requirements. The remaining investment will be made in securities which are either expected to be reasonably liquid or of varying maturity. However, the NAV of the Scheme may be affected, if the securities invested in are rendered illiquid after investment.

In addition, the Investment Manager will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The Investment Manager would use this analysis to assess the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

The Scheme may use derivatives instruments like Stock/ Index Futures or Options, Interest Rate Futures, Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging or portfolio balancing or any other purpose as allowed under the regulations, within the permissible limit of the portfolio, which may be increased as permitted under the Regulations and guidelines from time to time.

As a prudent measure, the AMC has broad internal investment norms and investments made through the scheme would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations.

II. Information about the scheme:

A. Where will the scheme invest:

Subject to the Regulations, the corpus of the Scheme may be invested in all or any one of (but not exclusively) the following securities:

ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitized debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

operations, private placement or rights offers. All investments in securities whether privately placed or otherwise will be in line with SEBI guidelines as applicable and the investment objectives and policies of the Scheme. Investment in unrated securities will be in accordance with SEBI guidelines as applicable.

Investment in other Schemes

The investment by the Scheme in other Mutual Fund Schemes will be in accordance with Regulation 44(1) read with Clause 4 of the VII Schedule to the SEBI (Mutual Funds) Regulations, 1996 according to which:

- The Scheme may invest in another scheme under the same asset management company or in any other mutual fund without charging any fees, provided the aggregate inter scheme investments made by all the Schemes under the same management or in schemes under the management of any other AMC shall not exceed 5% of NAV of the mutual fund.
- The Scheme shall not make any investment in any fund of fund scheme.

The investments in these deposits shall be in accordance with SEBI Circular Nos. SEBI/IMD/CIR No. 9/20306/03, SEBI/IMD/CIR No. 1/91171/07, SEBI/IMD/CIR No. 7/129592/08 dated 12 November 2003, 16 April 2007 and 23 June 2008 respective and any other applicable guidelines as amended or updated from time to time. The Scheme shall abide by the following guidelines for parking of funds in short term deposits:

- a) "Short Term" for parking of funds shall be treated as a period not exceeding 91 days.
- b) Such short-term deposits shall be held in the name of the Scheme.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market is the oldest and the largest component (70% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest

rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call (i.e. market for overnight and term money between banks and institutions)
- Tri-party repo (TREPS)
- Repo/Reverse Repo Agreement (temporary sale with an agreement to buy back the securities at a future date at a specified price)
- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / Financial Institution / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest spreads over similar maturity sovereign papers, on the back of comfort of majority government holding. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields prevailing as on May 31, 2024, some of the instruments:

Instrument	Current Yield Range
TREPS	6.30%-6.75% (overnight)
Market Repo	6.65%-6.67%(overnight)
3m Tbill	6.87%
1y Tbill	7.02%
10y G Sec	6.98%
3m PSU Bank CD	7.13%-7.15%
3m NBFC CP	7.70%-7.72%
3m Non NBFC CP	7.18%-7.22%

1y PSU Bank CD	7.63%
1y NBFC CP	7.92%
1y Non NBFC CP	7.65%-7.70%
5y AAA Institutional Bond (PSU Bond)	7.64%-7.68%
10y AAA Institutional Bond (PSU Bond)	7.46%-7.51%

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

B. What are the investment restrictions?

Pursuant to the "SEBI Regulations", the following investment and other limitations are presently applicable to the Scheme, as the case maybe:

Technical issues when transactions are processed through online facilities/ electronic modes:

The time of transaction done through various online facilities / electronic modes offered by the AMC, for the purpose of determining the applicability of NAV, would be the time when the request for purchase / SIP/ sale / switch of units is received in the servers of AMC/RTA. In case of transactions carried out through online facilities / electronic modes, there may be a time lag of few seconds or up to 1-7 banking days between the amount of subscription being debited to investor's bank account and the subsequent credit into the respective Scheme's bank account. This lag may impact the applicability of NAV for transactions where NAV is to be applied, based on actual realization of funds by the Scheme. Under no circumstances will AMC or its bankers or its service providers be liable for any lag / delay in

	<p>realization of funds and consequent pricing of units. The AMC has the right to amend cut off timings subject to SEBI (MF) Regulations for the smooth and efficient functioning of the Scheme.
