## DISCLAIMERS

DISCLAIMERS.....	39
------------------	----

October'16 started on a positive note with the newly constituted monetary policy committee (MPC) announcing 25 bps rate cut on back of lowering CPI, weak global environment and to provide impetus to the still recovering local economy. The month also marked the beginning of 2QFY16 corporate results announcements; so far the results have been in line with expectations. On global market development, US Fed is contemplating the raising rates but their next move is anybody's guess. Markets seem to have already discounted the possibility of a rate hike whether in December'16 or in coming months. ECB kept its policy rates unchanged however they indicated that they are open for new stimulus to boost inflation in the economy. The month even saw crude oil prices rallying a bit with it surging to one year high of USD 53. This upswing was post Russia's announcement of joining the OPEC's effort to reduce oil supply. However towards the end of the month, the price fell back to USD 48.3 as the market perceived any action from OPEC to be limited in nature.

## Market Performance\*:

In the month gone by, the broader market remained largely subdued with the mid-cap and small cap indices closing in green. Bellwether indices viz. Nifty 50 and S&P BSE Sensex closed at 8625.7 and 27930.21 gained 0.17% and 0.23% respectively after the customary Muhurat trading on 30th October'16. Though the main indices clocked marginal gains, S&P BSE Midcap indices gained 2.33% and S&P BSE Smallcap rose by 6.28%.

## IIP^:

The Index of Industrial Production (IIP) came at -0.7% (Y-o-Y) in August'16, as compared to -2.5% (Y-o-Y) growth in July'16. The decline in output is attributed to yet another contraction in capital goods. The output of capital goods declined by a steep 22.2%, marking it the 10th consecutive month of decline. Overall the use-based sector registered a muted growth; basic goods, intermediate goods and consumer goods grew by mere 3.2%, 3.6% and 1.1% respectively. On the Sector front, manufacturing and mining output shrank by 5.6% and 0.3% respectively while electricity output grew by 1.6%.

## Inflation^^:

CPI inflation eased to a 13 month low of 4.31% in September'16 against 5.05% in August'16. The new print of CPI is within RBI's near-term target of 4%, with a band of 2% on either side. The considerable softening in food & beverages inflation to 4.1% in September'16 from 5.83% led in moderating inflation. Wholesale inflation came in 3.57% in September'16 which was lower than 3.74% in August'16. The newly formed monetary policy committee of RBI cut rates as inflation was lower than expectations, and this may nudge banks to lower base rates and ease corporate lending rates. With inflation easing it opens room for RBI to maintain its accommodative stance going ahead as well.

## RBI's Monetary Policy^^:

The newly constituted Monetary Policy Committee (MPC) met for the first time on 4th October'16. All six member of MPC voted in favour of a 25bps rate cut. With comfortable liquidity scenario, we might see revival in bank credit and transmission of rates by banks. The easing of food prices provides leeway to RBI to act on rates. However, the MPC is likely to take into consideration the impact of 7th Pay commission and GST on inflation before further action on rates. We believe RBI may be in position to cut rates by 25 bps in current fiscal.

## Trade Deficit##:

Trade deficit for the month of October'16 widened to USD 8.34 billion from USD 7.67 billion in September'16. The month saw revival in exports registering a growth of 4.62% (Y-o-Y) to USD 22.88 billion. Imports contracted by 2.54% (Y-o-Y) to USD 31.22 billion due to decline in non-oil imports. The month witnessed oil imports widening by 3.13% (Y-o-Y) to USD 6.89 billion. Though the deficit has inched up, the revival in exports is positive. If the trends continues we might see narrowing of trade deficit in coming months.

## Triggers:

- The announcement of 2QFY16 corporate results is likely to be tracked by market participants.
- GST council is yet to decide upon the final tax structure. The progress of council in deciding the rates would be keenly followed.
- Inability of OPEC to decide production quotas and the discord between the OPEC producers is likely to have negative impact on crude oil prices. If the production freeze deal fails, we might see crude prices retracing to USD 40 levels.
- The US Presidential election seems to be close one, and is likely to have a meaningful impact on market sentiments going ahead.
- Though the possibility of Fed rate hike impact has been discounted for, there might be some knee jerk reaction by the market after the actual announcement.

^ mospi.nic.in  
^^ ICRA & RBI  
## Ministry of commerce

**Mr. Ravi Gopalakrishnan**  
Head - Equities

Indian equity markets were guided by 2QFY16 corporate results which have been in line with the market expectation and the unexpected rate cut by the RBI. Key domestic economic indicators provided a cautiously optimistic picture. Inflation was seen within the comfort zone of RBI while the pace of India's growth slowed slightly. The month of October'16 witnessed profit booking by FPIs which resulted in the outflow of funds from the Indian equities markets. The markets which had ended the last month in red rose marginally during the month.

## Market Performance\*\*

Equity markets were seen in a narrow range during the previous month. On net basis India's bellwether indices viz. S&P BSE Sensex & Nifty 50 witnessed slight positive momentum rising by 0.23% & 0.17% respectively while S&P BSE Mid- cap index & S&P BSE Small-cap index rose by 2.33% & 6.28% respectively.

S&P BSE Oil & Gas, S&P BSE Metal and S&P BSE Consumer Durables were the top performing sectors during the month rising by 8.26%, 5.67% and 3.02% respectively. S&P BSE IT, S&P BSE Auto & S&P BSE FMCG were the sectors seen under pressure.

## Growth`

Indian manufacturers enjoyed yet another month of solid operating conditions during Sept'16. With demand from the external markets picking up, companies saw higher export orders; strongest since Jul'15. Slowing from 52.6 in Aug'16 to 52.1 in Sept'16, the index saw intensification of inflationary pressures, leading to the input costs and output charges increasing at a quicker rate.

Meanwhile, at 52.4 in Sept'16, down from 54.6 in Aug'16, the seasonally adjusted Nikkei India Services Business Activity Index mirrored trends for new business. The slow pace of growth in the activity of the service providers could be attributed to the increasing cost of production; albeit highlighting the on-going growth in the country is on the right path.

## IIP^

Remaining in the negative territory for the second month in a row, industrial production contracted by 0.7% in August'16; following an upwardly revised 2.5% fall in July'16; due to slump in manufacturing, mining and capital goods segments. The Indices of Industrial Production for the Mining, Manufacturing and Electricity sectors for the month of August'16 were seen growing at (-) 5.6%, (-) 0.3% and 0.1%. In terms of industries, seven out of the twenty two industry groups in the manufacturing sector have shown negative growth.

## FPI Outflows\*\*

The month saw reversal in FPI (Foreign Portfolio Investor) flows. From investing close to Rs. 10,443 Crs in Indian equities in September'16; FPIs withdrew around Rs. 4,306 Crs. in Indian equities in the month gone by. The outflow of funds could be attributed to profit booking. This was also the first time that the FIIs have turned net sellers in Indian Equities in the current Financial Year.

## Outlook

On global front, all eyes are now on the FOMC meeting and the possibility of rate hike in December'16. We believe that, this hike will be dependent on domestic US data and the global environment. While there may be some knee-jerk reaction post the announcement, India is unlikely to see huge foreign outflows as the macro-economic variables in the country continue to remain strong compared to other emerging economies.

The earnings season so far has been in line with our expectations with no major negative surprises. We expect the earnings in the coming few quarters to be subdued and corporate profits and margins are likely to start responding to the improving economy by the next financial year. We expect support for domestic cyclical and capex industries from declining interest rates while exporters and defensive sectors are likely to face some pressure due to slowdown in global growth.

Despite the near-term challenges, the long term potential of Indian economy remains intact. We expect markets to remain volatile in the near term owing to US Fed stance. With expectations of improving growth and the economy likely to benefit from being a favourable investment destination globally, India should continue to attract steady inflow of foreign investments. We continue to be constructive on equities and hence, in our opinion, we see merit in increasing allocation to equities in a staggered manner to even out the market volatility.

**Mr. Avnish Jain**  
Head - Fixed Income

During the start of October'16, Indian bond market saw yields moderating on account of positive domestic macroeconomic variable and continued global uncertainty. The newly formed Monetary Policy Committee (MPC), announced a surprise rate cut of 25 bps in RBI's 4th bi-monthly policy. In its commitment towards increasing the participation of foreign investors in bond market and enlist them in market development, RBI in the first week of October'16 announced the increase in quantum of FPI limits. This move along with the positive Inflation print helped boost the market sentiments and resulted in the 10 year benchmark yield to drop from 6.82% at the start of the month to 6.67% in a couple of trading sessions. However, yields went up on back of global bond market weakness and profit booking, ending the month at 6.79%. FPIs also sold, resulting in the outflows\* to the tune of `6000 Cr as against an inflow of over `9800 Cr in the previous month. During the second half of the month, RBI announced OMO Purchase auction of `10,000 Cr which didn't have any positive impact on yields. Also, the global volatility concerns such as UK's exit from EU, narrowing ECB's bond buying program and US Fed's caution on rate move has kept domestic market in a narrow range. Market activity was limited on account of festival season.

## **RBI prioritises growth over inflation, cuts rate by 25 bps^:**

The newly formed MPC voted unanimously to cut the key interest rate by a 25bps in its first policy review, citing moderating momentum of food inflation opening up space for a rate cut. Higher sowing of crops and supply management measures have helped curb rising food prices. MPC highlighted the potential cost push pressures from the 7th Pay Commission award on HRA and increase in minimum wages with possible spill overs through minimum support prices (MSP) for farm produce. Overall, RBI's stance on inflation and growth expectations appears to be more dovish than initially envisaged.

## **Inflation continues to ease amid softening food inflation#:**

September'16 CPI inflation eased to 13-month low of 4.31% as against 5.05% in August'16. Food remained a key contributor to this sharp easing of price pressures. However, Core CPI inched up to 4.88% from 4.72% in the previous month. The receding pressure from the food segment has kept the wholesale level down. The wholesale inflation declined to 3.57% in September'16 after it touched a two-year high in August'16 at 3.74%.

## **Fiscal situation deteriorated as compared to last year~:**

The fiscal deficit in first half of the current financial year widened to 83.9% as compared to the budget target of 68.1% of the last year. In absolute terms, fiscal deficit for H1FY17 was `4.48 lakh crore, the highest level recorded for April-September'16 in last two decades. The rise in capital expenditure as well as revenue expenditure primarily on account of increase in salaries due to the implementation of 7th CPC. The gap between the expenditure and revenue for the entire fiscal, has been pegged at `5.33 lakh crore, or 3.5% of GDP, in 2016-17. The government is expected to improve the fiscal condition and achieve the targeted level by taking actions such as spectrum auctions, strategic sale in public sector companies and disinvestment.

## **Outlook:**

Unforeseen global volatility especially low global growth & the impact of the Great Britain exiting the EU would remain key factors along with domestic data before the US Fed decides its future developments. However, the market anticipates US Fed increasing the interest rate in one of the next two meetings depending on the economic data and the upcoming election. Markets may remain volatile due to the US Presidential election and post that the expected increase in FED funds rate in December'16 FOMC.

India is heading towards structurally lower inflation. With relatively better monsoon which has helped to stabilize food prices and the formation of MPC which is committed towards targeting inflation, volatility in inflation is expected to reduce, moving India from a volatile high inflation environment to one with a low and stable inflation. Maintaining policy continuity, the MPC reiterated 'accommodative' stance on liquidity and displayed comfort on improving inflation fundamentals. With the expected continued downtrend in CPI, we expect another 25 - 50 bps rate cut by RBI by April'17.

During H1FY17, the bond market has experienced sharp rally owing to global sentiments and the favorable domestic macro-economic conditions & positive liquidity management by RBI. Future course of the Indian bond market would be guided by the market economic variables and major policy implementation such as GST and the 7th CPC. With the 10 year yields coming down considerably, we continue to believe that the appetite in the market is still present. Based on the current market sentiments, we expect the new 10 year to trade between 6.60 - 6.80% in the near term, in absence of any external factor or event.

## Overview:

Gold prices edged lower by almost 3% in the month of October 2016 as the US Dollar Index gained some more momentum over the rising chances of a rate hike by the Federal Reserve. The greenback also received further investor interest towards the end of the month after the FBI revealed it reopened an investigation of U.S. Democratic presidential candidate Hillary Clinton's use of a private email system, sparking fresh panic in markets, just days before the US presidential vote on 8th November '16. The yellow metal registered its first monthly close below the \$1300 per troy ounce mark since the Brexit referendum result (June 2016) as it closed at \$1277.2 per troy ounce. The US Dollar Index gained 3.1% during the month to close at 98.445, a level last seen at the start of 2016. The on-going festive demand saw the rupee price of gold trading at a premium for some time during the month before moving back into discount territory. The rupee price of gold closed at Rs.30049 per 10 grams, down by 3.6%.

## US Economic Data

The U.S. non-farm payroll addition failed to impress the market and fell short of market expectations with 156,000 jobs in September '16. The growth in wages, was also lower than expected and the unemployment rate climbed back to 5%. In totality the labour report however helped raise the odds of a December rate hike. At the end of October 2016, the probability of a rate hike in November 2016 slipped to 16.1%; while for December 2016 the odds rose to 71.4%. Most other economic releases remained balanced. Housing sector witnessed some positive growth with building permits rising by 6.3% which is the most on a month-on-month basis since November 2015. Inflation was also a green tick during the month as most indicators came in higher than previous which was complimented by impressive retail sales and auto sales growth.

## Central Banks in limelight

The Federal Open Markets Committee (FOMC) minutes for its September 2016 meeting were released which indicated that the Federal Reserve's decision not to increase rates in September was a close call. The number of dissenters to the Fed decision (of not raising rates) rose to three from one as they voted in favour of hiking interest rates. The ECB also held its benchmark refinancing rate at 0 percent in line with expectations while reiterating its willingness to work aggressively towards their inflation target.

## Outlook:

The US elections seem to be the key event driving gold prices taking over the mantle from FOMC meetings as investors give preference to politics over economics. While the race for the White House is bound to be a key event driving global asset classes, the role of Gold has been further accentuated as the election of Donald Trump in the forthcoming elections, could lead to significant escalation in political uncertainty. The Democrat Hillary Clinton's lead against Republican Donald Trump has halved since an email scandal came back to the fore recently, which has led to an improvement in his chances to win. Gold prices would see a sizeable rally in the event of a surprise election outcome of a Republican victory however a Clinton victory could see some minor correction.

Investors should expect increased volatility around the US elections as the markets are still moving from risk-on to risk-off mode with no clear trend in sight. Gold prices also are expected to remain volatile with political and economic uncertainties driving it in different directions. While on one hand, a round of positive economic data in US could keep a lid on Gold prices, the high uncertainty in the markets - taking into account the U.S. presidential elections, the Brexit talk, the struggle of EU banks should keep demand for Gold intact which acts as an efficient crisis hedge.

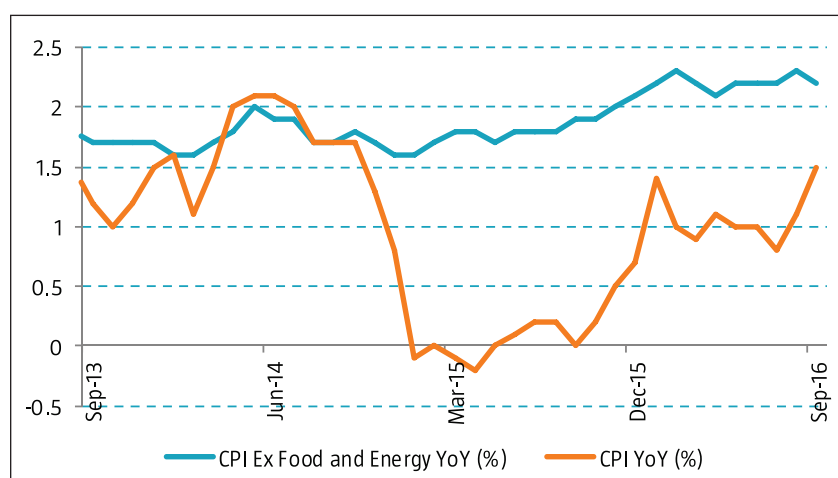

After the election results, investors are expected to revert back to focussing on every economic report in US data and how it moves the chances of a rate hike by the Fed in December '16. The October '16 labor report and November '16 FOMC meeting minutes would be key data releases which could provide cues on the possibility of a December '16 rate hike. However, the route to a rate hike is filled with questions on the strength of the US economic recovery. While we have seen unemployment rates touch to pre-crisis lows, wage growth remains timid which points towards stunted inflation. Also, though we have seen inflation picking up in US recently on the back of energy prices, core inflation remains low.

In Europe, the modest economic recovery continues to be marred by uncertainty around Brexit negotiations and other political risks. Mariano Rajoy was re-elected as Spain's prime minister last month ending a bitter period of political deadlock. However Italy referendum in December is expected to keep markets on the edge.

Strong seasonal demand for Gold saw domestic prices trading at a premium to actual prices during the month. However, gold prices swung in to discount towards the end of the month as gold prices (in dollar terms) moved higher around Diwali. Any correction in global prices of gold is expected to again push the prices back in the premium zone due to the on-going festive and wedding demand for gold.

Source: Bloomberg

## Chart of the Month:

Source: Bloomberg

## 'AU'some Fact of the Month:

The deepest mine in the world is Mponeng gold mine, southwest of Johannesburg, South Africa, where miners now drill more than 3.9 kilometers below ground (2.4 miles). Rock temperatures reach 55 degrees Celsius. Huge refrigeration and pumping equipment cool the air to a more bearable 28 degrees Celsius.

### PRODUCT POSITIONING

Canara Robeco Balance aims to generating long-term capital appreciation through a prudent mix of equity and debt portfolio, making it more suitable for the average investor as it takes away the burden of focusing on asset allocation between equity & debt. The fund invests in a careful blend of select stocks and debt securities which effectively spreads the risk.

## PRODUCT POSITIONING

The fund provides a unique combination of Debt and Gold (through Gold ETFs) in one fund. The fund aims to generate alpha through moderate duration play & by capturing the seasonal patterns in Gold. The fund acts as a portfolio diversifier and also provides a blend of accrual & capital appreciation to its investors. The fund through its Gold investment aims to generate additional yield without taking additional credit risk on the fixed income portfolio.

## PRODUCT POSITIONING

Canara Robeco Income is an actively managed debt fund wherein the fund manager takes an active view of the interest rate movements. Based on the interest rate view, the duration of the portfolio will be decided along with the asset allocation pattern between sovereign & corporate bonds. As majority of the portfolio gets invested in high quality debt papers, it provides consistent accrual income to the portfolio.

## PRODUCT POSITIONING

Canara Robeco Dynamic Bond Fund intends to invest and trade in G-secs and Corporate Debt by identifying mispriced opportunities & capturing volatility trends. The fund aims at generating Alpha through free-style duration management depending on the interest rate view. At the same time it endeavours to capture accruals in the form of portfolio running yields on high-quality debt instruments.

### PRODUCT POSITIONING

Canara Robeco Short Term Fund is perfectly suited for an investor who has a short term investment horizon of 6 to 9 months and wishes to avoid high volatility. In terms of risk return, Canara Robeco Short Term Fund is positioned between Floating Rate Funds & Medium Term Funds. The fund generates income predominantly from accrual yields on high quality Money Market Instruments, while an active trading strategy is followed for generating Alpha.

## PRODUCT POSITIONING

Canara Robeco Yield Advantage seeks to maximize returns through active management of the portfolio consisting of wide range of Debt and Money Market Instruments. The Fund takes Corporate Bond exposure (80-100%) with the aim to generate accrual returns. The scheme may also tactically allocate to money market and government securities (0-20%) to manage liquidity and generate capital appreciation

## DEFINITIONS

### **Total Expense Ratio**

Expressed as an annualized percentage, it is the ratio of all the expenses of the fund to the total assets of the fund and includes the fund management fees paid to the asset management company for managing the fund's assets.

### **Sharp Ratio**

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

### **Beta Ratio**

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

### **Portfolio Turnover Ratio**

It is a measure of how often assets within a fund are churned.

### **Modified Duration**

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

### **Average Maturity**

It is the weighted average of residual maturity of debt securities in a fund portfolio

### **Portfolio Yield**

Weighted Average valuation yield of the assets

### **Standard Deviation**

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

### **Risk Free Return**

It represents the rate of return an investor could have earned by investing in a security which is believed to have zero investment risk over the specified period of time.

### **Tracking Error**

Tracking error is a measure of how closely is a scheme able to imitate the index to which it is benchmarked. It is the standard deviation of the difference between the scheme and index returns.

### **R-Squared:**

It is a statistical measure of how closely the portfolio returns are correlated with its benchmark.

## HOW TO READ A FACTSHEET

### Fund Manager

An employee of the asset management company who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

### Minimum Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

### Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

### Minimum Additional Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

### Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until Maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

### SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

### NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

### Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

### Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.

### Exit Load

Exit load is charged at the time an investor redeems the units of mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance if the NAV is Rs. 100 and the exit load is 1% the investor will receive Rs. 99.

### Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

### Standard Deviation

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

### Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

### Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

### AUM

AUM or assets under management refers to recent / updated cumulative market value of investments of a scheme managed by the mutual fund.

### Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

### Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

### Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
