Economic Indicators

(as on June 30, 2020)

Inflation in India (%)

CPI drastically decreased to 5.84% in Mar'20 from 6.58% in Feb'20 to a four month low. Major reason was because of easing food prices. The current level of inflation has surpassed RBI's medium term inflation target of 4% for the sixth time since Sep'19. WPI saw a sharp downtick to 1% in Mar'20 from 2.26% in Feb'20, as both fuel and manufactured price inflation turned negative due to falling crude oil prices and companies losing pricing power amid fall in demand due to outbreak of novel coronavirus and nationwide lockdown.

Indian Business Indicators - PMI

The Nikkei India Manufacturing PMI saw a minor uptick to 30.8 in May'20 from record low of 27.4 in Apr'20 due to deterioration in business conditions. New orders placed with producers continued to fall. Weak demand from international markets added to the deteriorating sales trend. PMI Services increased to 12.6 in May'20 from the lowest number recorded of 5.4 in Apr'20. This is the second-sharpest deterioration in business activity amid the ongoing national lockdown restrictions. New orders and employment fell sharply and exports collapsed.

Equity Markets - India & US

Bellwether indices, Nifty 50 and S&P BSE Sensex gained more than 7.5% from the previous month during the month of June'20 as government eased the lockdown in phased manner and over optimism about a potential vaccine for the coronavirus. There was a good inflow from the FIIs and as Government approved a scheme aimed at improving the liquidity position of NBFCs/HFCs through a special purpose vehicle (SPV) kept the investors sentiments high. Dow Jones was also trading higher over optimism that the spread of the coronavirus is slowing down and buying interest was found among the investors.

India GDP Growth Rate

India's Real GDP came in at 3.1% for Q4 FY20, better than expectation but lower than the 4.1% witnessed in the previous quarter. It slumped to more than eight years' low. The key manufacturing sector, consumer demand, private investment and construction sector showed signs of sluggishness compared to previous quarter amid deteriorating global environment amid corona virus pandemic.

Source: Bloomberg

India Industrial Production (%)

IIP contracted the most in at least two decades from -18.3% in Mar'20 to -55.5% in Apr'20 as biggest lockdown to contain the new coronavirus pandemic put a hold on most industrial production for that month. Mining, manufacturing and electricity sector showcased poor growth due to nationwide lockdown. Manufacturing sector was worst hit as it experienced a fall of 64.2%, mining activity also dropped by 27.4%. On the other hand, electricity generation declined by a cool 22%. Overall, all twenty-three industry groups in manufacturing sector showed a negative growth during the month of Apr'20.

USD INR & Brent Crude Movement

Brent crude oil increased back to ~US\$41.15 per barrel as countries started across the globe started easing restrictions and on therefore on the hope of increase in fuel demand. Data by U.S also stated of fall in crude inventories. The Rupee closed the month on 75.51 per USD as on 30th June'20, almost at the same price like last month amid gains in domestic markets.

Interest Rate Movement (%) - India & US

Markets remained mostly range bound but ended on a higher note, with yield on the 10-Year benchmark paper closing at 5.89% on 30th June'20 vs 5.762% on 29th May'20 as investors resorted to value-buying and on concerns over excess supply of sovereign debt. 10-year U.S. Treasury bond closed higher at 0.6561 on 30th June'20 vs 0.652% on 29th May'20.

Equity Market Review

Mr. Shridatta Bhandwadar
Head - Equities

- ▶ June 2020 saw a good month for Indian Equity Market as Nifty 50 and Sensex soared by more than 7.5% by month end. Globally too, equity markets were buoyant and outperformed during the same time period.
- ▶ During the month, Foreign Institutional Investors (FIIs) were net buyers to the tune of USD2,473 Mn while Domestic Institutional Investors (DIIs) were net buyers to the tune of USD 319 Mn.
- ▶ On the COVID front, India continues to record a steady rise in the number of cases. What is somewhat heartening is the rise in the recovery rates and also the positive development on the effectiveness of a few drugs including Remdisivir and Favipiravir.
- ▶ On the sectoral front, Realty gained the most at 12% followed by Bankex, Auto, Consumer Durable and Oil & Gas sector which gained 9.7%, 8.3%, 7.2% and 7% respectively. All the top sector indices were in positive on m-o-m basis.

Indices Performance (M-o-M Basis) (in %)	
Nifty 50	7.5
Sensex	7.6
S&P BSE India Realty	12
S&P BSE India Bankex	9.8
S&P BSE India Auto	8.3
S&P BSE Consumer Durables	7.2
S&P BSE India Oil & Gas	7.0

Outlook – Economics taking precedence over healthcare issues

Globally economies went into lockdown during Jan-June 2020 to put in place healthcare infrastructure and to contain community spread of COVID-19. Clearly at the start, it was imperative to look at healthcare issues at the cost of economic realities. Most Govt. have succeeded to different degrees, in this attempt to contain virus, although not fully. As time elapsed, economic realities are taking precedence and thus we expect opening of economies to continue, with minor localised lockdowns across globe and domestically.

During June, the Global equity markets continue to recover from the lows formed during March'20. This sharp bounce back is driven by three things, –1) Massive fiscal and monetary stimulus put in place by developed countries – expect more of this on any sign of troubles in economies, 2) News flow on possible usage of existing drug combination as a remedy for COVID patients /vaccines moving into 1st and 2nd stage of trials and 3) Opening up of economies across the world and particularly in Europe, US and China(90% open).

Key driver from market perspective has been fiscal stimulus to the tune of 5%-20% GDP across developed world, along with central bank's monetary policy extension into buying of lower grade corporate bonds, including Junk bonds in US. Monetary expansion is also driving reflation of assets in the other geographies and commodities. We think, more will follow from countries like China and Euro zone. Oil and several other commodity prices have stabilised and have moved up (due to depreciation bias in USD and China operating at >80%) - which augurs well for several ME/African/LA and CIS countries.

Domestically, while the overall figure crossed 7lac, the COVID cases growth rate has remained in the range of 3-5% on daily basis. Doubling rate has increased to more than 20 days now and recovery rate at more than 60% is also heartening. Fatality rate at just above 2.8% is also among the best globally. The key risk remains whether we will be able to sustain these numbers as we gradually get out of lockdown of past 60-70 days. With migrants travelling back to home states and economy opening up meaningfully, India runs a risk of exponential increase in numbers – which can act as a potential risk to markets are current levels. However, statistically none of COVID data points domestically today suggest dramatic closing of broader economy again (neither can India afford it now)

Economic consequences are severe, as 2-2.5 months lockdown will effectively mean US\$200-300bn of GDP loss. RBI has been aggressive in providing liquidity of almost Rs4trn to system

- ▶ Market witnessed some volatility as there were renewed signs of geo-political tension between India and China at Ladakh border and major rating agencies downgrading outlook of India.
- ▶ Positive developments on the discovery of the potential vaccine for coronavirus and government's announcement to ease lockdown in phased manner across the country after almost two months of strict measures kept investor sentiments high, albeit for short spans.
- ▶ May merchandise trade deficit narrowed to a decade low \$3.2bn on weak crude and faster recovery in exports vs imports.
- ▶ RBI's Forex reserves hit a record \$500bn on portfolio inflows and lower trade deficit.
- ▶ Globally also major markets witnessed buying spree led by continued optimism over economic recovery following gradual reopening of business coupled, U.S. Federal Reserve expanded its bond-buying program.

through CRR cut, LTROs etc. RBI increased moratorium period to 6 months so that households and corporates can manage the cash flows better (creates little bit of moral hazard issues. Key is how Govt responds to the situation as it unfolds. The initial response on fiscal front from Govt is muted at ~2% GDP. Also, the initial Rs1.7lac Crs package was more to ensure than people don't go hungry during lockdown. Government, given its fiscal constraints, may not be able to give meaningful demand push. This will be key (apart from COVID numbers recovery) for how fast the country recovers through the cash flow losses that entire system has witnessed for last 45-60 days.

There are two distinct benefits India will see out of Corona Virus issue – 1) Many global corporations will now actively seek to diversify the supply chain to countries other than China (India is well positioned now with corporate tax cuts etc.) and 2) Oil price decline will act as a fiscal and CAD boost to India (given Govt will keep major part of benefits of price decline. Every US\$10/bbl oil helps India to save Rs700bn assuming everything is kept by Government through tax increases. This can create possible space for fiscal stimulus as time passes, which hitherto was missing in India. Lack of aggression on fiscal expansion is a key risk to possible upside in economy and markets.

Based on above we are working with three thesis –1) Developed world through aggressive fiscal expansion will lead the aggregate demand recovery, 2) Indian rural will do relatively better given higher water reservoirs, crop production and stimulus from Govt and 3) Economies will gradually keep opening up irrespective of COVID, as economic realities down on Governments

Nifty has almost recovered ~40% from bottom of 7511 formed in last week of March. The recovery has been in line with global markets. Nifty now is trading at 17.5x FY22 (ignoring FY21 as it would be a washout year from earnings perspective) on consensus earnings – no more in a attractive zone from near term perspective. Although, the benchmark 10 yr bond yields is at 5.8%. Thus, now the equity and bonds are trading at almost same yield of 5.5-6% - which is typically a very attractive medium-term valuation start point for equities, if one looks through the cycle of 24-36months. After selling aggressively US\$8bn in March/April, FIIs have been modest buyers during May/June. Currently market looks evenly balanced at fair valuation from near term perspective. We expect market to consolidate now with meaningful divergence within sectoral performance based on incremental data points and opening up of economy over next 1-2 quarters.

Debt Market Review

Mr. Avnish Jain
Head - Fixed Income

Fixed Income Market update**

Yields on long term bond hardened marginally in the month of Jun'20 amidst rising debt supply and lack of action by the RBI to support the bond market. Factors such as geo-political tension between India and China at the Ladakh border and the uncertainty across major economies amidst Covid-19 kept the market participants cautious. In the recent projection, World Bank estimated India's economy to contract 3.2% in FY21 due to stringent measures taken by the government to restrict the spread of COVID-19, resulting in a delay in many business-related activities.

Globally, the market remained volatile due to the resurgence of cases of Covid-19 infected numbers albeit ease in lockdown across major economies. While the surge of COVID-19 infections in parts of the US and fear of a second wave have kept the investors wary, economic activity continued to show improvement due to the easing of lockdowns that began last month. However, Europe managed to contain virus case growth and therefore has been able to reopen its economies more quickly than the US. US 10 Year Treasury yields increased during the month but ended flat on a month on month basis by the end of the month at 0.66%.

On the domestic front, India's current account balance became surplus primarily on account of a lower trade deficit and a sharp rise in net invisible receipts in the Q4FY20 for the first time in more than a decade. Current account surplus stood at USD 0.6 billion (0.1% of GDP) in Mar'20 compared with a deficit of USD 4.6 billion (0.7% of GDP) in the corresponding period last year. During the month of Jun'20, after Moody's downgraded India's sovereign rating from Baa2 to Baa3, Fitch Ratings also revised the Outlook on India's Long-Term Foreign-Currency Issuer Default Rating (IDR) to Negative from Stable and affirmed the rating at 'BBB-' on the back of contraction in economic activity and weakened economic outlook.

The government withheld the headline retail inflation data for May'20 due to the lack of data owing to lockdown restrictions. However, retail food inflation saw a year-on-year rise to 9.28% in May'20. India's Consumer price index (CPI) based inflation or retail inflation accelerated to 5.84% YoY in Apr'20 from 2.86% in Apr'19. The wholesale price index fell 3.21% YoY in May'20 compared with 2.79% rise in May'19. Contraction could be attributed to a fall in demand amid an economic hit in the wake of the COVID-19 pandemic. Indian 10yr G-sec (5.79% GS 2030) increased marginally to 5.89% on 30th Jun'20 from 5.76% on 29th May'20. Brent Crude traded higher by USD5.82 per barrel during the month and ended at USD41.15 per barrel on 30th Jun'20 on the back of gradual easing of restrictions on coronavirus lockdown and upbeat US job numbers and increase in demand. Indian Rupee appreciated by Rs.0.11/\$ to close at Rs.75.51/\$ on 30th Jun'20 as compared to Rs.75.62/\$ on 29th May'20.

Outlook:

- ▶ The coronavirus led pandemic has significantly weakened India's growth outlook at least for the FY21. The recent lockdown and ongoing uncertainties have exposed the challenges associated with the high public debt burden.
- ▶ On the domestic front, geopolitical risk related to the longstanding border issue with India's neighbor which has recently intensified could discourage the economic recovery path with the ongoing economic reform initiative and implementation and could lead to uncertainty in the market.
- ▶ On the global front, with the business sentiment improving which reflects the easing of lockdowns we could expect steady recovery in the major economies going forward. However, with central banks having limited room to lower policy rates from current levels and are also unlikely to raise rates for the foreseeable futures, the market could expect the rate to remain range-bound for short to medium term period.
- ▶ With the slowdown in revenue, increasing fiscal deficit and public sector debt burden, the medium-term fiscal outlook looks uncertain and would largely depend on the economic growth and the government's policy implementation. Factors such as asset-quality challenges in banks and liquidity issues in non-banking financial companies (NBFC) could also impact the medium-term growth outlook.
- ▶ The recent special economic package announcements by the government in response to the pandemic to strengthen the economy could improve India's fiscal position and help recovery over the medium term. In addition, the forecast of normal monsoon and the reforms to improve the efficiency of agricultural supply chains could help reduce a food price which has a significant share in the CPI basket and keep inflation numbers moderate in the coming quarters.
- ▶ Looking at the ongoing volatility and global economy being uncertain, the Indian economy could take time to recover and RBI may reduce the interest rates during the current financial year to shore up the economic activity and could remain accommodative. We continue to recommend funds investing in high-quality corporate bond and money market instruments. We recommend investments in Low Duration Funds, Short Duration Funds, and Corporate Bond Funds depending on the investment horizon of investors.

HOW TO READ A FACTSHEET

Fund Manager

An employee of the asset management company who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Minimum Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme

Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until Maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.

Exit Load

Exit load is charged at the time an investor redeems the units of mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance if the NAV is Rs. 100 and the exit load is 1% the investor will receive Rs. 99

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM

AUM or assets under management refers to recent / updated cumulative market value of investments of a scheme managed by the mutual fund.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

DEFINITIONS

Total Expense Ratio

Expressed as an annualized percentage, it is the ratio of all the expenses of the fund to the total assets of the fund and includes the fund management fees paid to the asset management company for managing the fund's assets.

Sharp Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit or risk.

Beta Ratio

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Portfolio Turnover Ratio

It is a measure of how often assets within a fund are churned.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Average Maturity

It is the weighted average of residual maturity of debt securities in a fund portfolio

Portfolio Yield

Weighted Average valuation yield of the assets

Standard Deviation

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Risk Free Return

It represents the rate of return an investor could have earned by investing in a security which is believed to have zero investment risk over the specified period of time.

Tracking Error

Tracking error is a measure of how closely is a scheme able to imitate the index to which it is benchmarked. It is the standard deviation of the difference between the scheme and index returns.

R-Squared:

It is a statistical measure of how closely the portfolio returns are correlated with its benchmark.
