SECTION IV - RISK FACTORS

1. <u>Standard Risk Factors:</u>

a) Standard Risk Factors for investments in Mutual Fund

- Mutual Fund Investments are subject to market risks, read all scheme related documents carefully.
- Mutual Funds and securities investments are subject to market risks and there can be no assurance or guarantee that the objectives of the Scheme will be achieved.
- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down.
- The past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme, its future prospects or returns.
- Canara Bank and ORIX Corporation Europe N.V (formerly Robeco Groep N. V.), being the Sponsors, are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 10 Lacs made by it towards setting up Canara Robeco Mutual Fund.
- The present schemes are not a guaranteed or assured return scheme.
- The Mutual Fund is not assuring any IDCW nor is it assuring that it will make any IDCW distributions. All IDCW distributions are subject to the availability of distributable surplus and would depend on the performance of the scheme.

b) <u>Risk factors of not maintaining average AUM of Rs. 20 crore on half yearly rolling basis</u>

Open ended debt oriented schemes shall maintain an average AUM of Rs. 20 crore on half yearly rolling basis. In case, the average AUM falls below Rs. 20 crore, the AMC shall scale up the AUM of such Scheme within a period of six months so as to maintain the average AUM of Rs. 20 crore on half yearly rolling basis, failing which the Scheme shall be wound up in accordance with the provisions of Regulation 39 (2) (c) of SEBI (Mutual Funds) Regulations, 1996 as amended from time to time.

c) <u>Risk associated with investment in derivatives and different derivative strategies:</u>

Risk associated with investing in Derivatives:

As and when Schemes trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies.

The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme's original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme's portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme's returns and increase the Scheme's potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

• Trading in derivatives has the following risks:

- a) An exposure to derivatives in excess of the hedging requirements can lead to losses.
- **b)** An exposure to derivatives can also limit the profits from a genuine investment transaction.
- c) Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.

d) Particular Risks of Exchange Traded Derivative Transactions

The securities exchange on which the shares of the Scheme may be listed may have the right to suspend or limit trading in all securities which it lists. Such a suspension would expose the Scheme to losses and delays in its ability to redeem shares of the Scheme.

e) Stock Market Fluctuations

Investors may note that the value of their investment may fall as well as rise and they may get back less than they originally invested. The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.

f) Income Distribution cum Capital Withdrawal (Dividends)

The Scheme may distribute not only investment income, but also realized capital gains or capital. Where capital is distributed, this will result in a corresponding reduction in the value of shares of the Scheme, and a reduction in the potential for long-term capital growth.

g) Warrants

The Scheme may invest in warrants, the values of these warrants are likely to fluctuate more than the prices of the underlying securities because of the greater volatility of warrant prices.

h) Futures and Options

The Scheme may use options and futures on securities, indices and interest rates for the purpose of efficient portfolio management. Transactions in futures and options carry a high degree of risk. A relatively small market movement will have a proportionately larger impact which may work for or against the investor. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.

i) Listing

In case the shares of the Scheme are listed, the exchanges on which those shares are listed will have no responsibility for the contents of any prospectus issued by the Scheme or will make no representations as to its accuracy or completeness and expressly disclaim any liability whatsoever for any kind of loss arising from or in reliance upon any part of any such prospectus.

d) Other risk factors (viz. Swing pricing, investment in CDMDF, LRM etc.)

i) Swing pricing framework for open ended debt schemes of Canara Robeco Mutual Fund

With a view of safeguarding the interest of small investors against any large redemptions, SEBI vide its circular SEBI/HO/IMD/IMD-II DOF3/P/CIR/2021/631 dated September 29, 2021 introduced provisions pertaining to Swing Pricing Framework for open ended debt schemes (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) with effect from **May 01, 2022**.

In view of the provisions mentioned in aforesaid circular, a mandatory full swing pricing framework, during market dislocation times (as and when declared by SEBI), is being introduced in all open ended debt schemes of Canara Robeco Mutual Fund (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) as given below:

Meaning of Swing Pricing:

Swing pricing refers to a process for adjusting a fund's Net Asset Value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity during the life of a fund, excluding ramp-up period or termination. In other words, Swing Pricing is an anti-dilution technique which helps funds manage liquidity risks internally by effectively passing on transaction costs to the unitholder/investors associated with that activity. In a liquidity-challenged environment, quoted bid/ask spreads and overall trading cost can widen and may not be representative of the executed prices that can be achieved in the market. In such circumstances, swing pricing can be a useful mechanism to contribute to protect the interests of existing investors, specifically from the dilution of their holdings; and contribute to protect the value of the investors capital.

Applicability of Swing Pricing Framework:

The swing pricing framework will be made applicable only for scenarios related to net outflows from the debt schemes.

SEBI will determine 'market dislocation' either based on AMFI's recommendation or suo moto. Once market dislocation is declared, it will be notified by SEBI that swing pricing will be applicable for a specified period.

Subsequent to the announcement of market dislocation, the swing pricing framework shall be mandated only for open ended debt schemes which:

- 1. Have "High" or "Very High" risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation) and
- 2. Potential Risk Class (PRC) cells A-III, B-II, B-III, C-I, C-II and C-III

Minimum swing factor for open ended debt schemes:

Following mandatory swing factor will be applied on redemption and subscription transactions in the above-mentioned schemes during market dislocation period announced by SEBI.

	Minimum swing factor for open ended debt schemes			
Credit Risk of scheme \rightarrow	Class A	Class B	Class C	
Interest Rate Risk of	(CRV*>=12)	(CRV>=10)	(CRV<10)	
scheme 🗸				
Class I: (MD<=1 year)	Nil	Nil	1.50%	
Class II: (MD<=3 years)	Nil	1.25%	1.75%	
Class III: Any Macaulay	1.00%	1.50%	2.00%	
Duration (MD)				

*CRV: Credit Risk Value

Applicability of Swing Pricing to Investors:

When swing pricing mechanism is triggered and swing factor is made applicable during market dislocation, both the incoming and outgoing investors shall get NAV adjusted for swing factor. Swing pricing shall be made applicable to all

unitholders at PAN level, with an exemption for redemptions up to Rs. 2 lakhs for each mutual fund scheme for market dislocation.

Illustration on swing pricing - market dislocation as announced by SEBI:

Risk-O-meter	PRC	Computed NAV (Rs.)	Swing Factor Applied	Swing NAV (Rs.)
	A-III	14.0000	1.00%	13.8600
	B-II	14.0000	1.25%	13.8250
High /Von High	B-III	14.0000	1.50%	13.7900
High / Very High	C-I	14.0000	1.50%	13.7900
	C-II	14.0000	1.75%	13.7550
	C-III	14.0000	2.00%	13.7200

When swing pricing is triggered, the NAV will be adjusted as follows:

Disclosures pertaining to NAV adjusted for swing factor:

The scheme performance shall be computed based on scheme NAV before swing adjustment i.e. the unswung NAV.

Disclosures pertaining to NAV adjusted for swing factor along with the performance impact shall be made in the SIDs of respective schemes as per the format prescribed by SEBI and in scheme wise Annual Reports and Abridged summary and the same shall be disclosed on the website prominently only if swing pricing framework has been made applicable for the said mutual fund scheme.

The Swing Price Framework shall be subject to the provisions of circulars and guidelines laid down by SEBI and AMFI from time to time.

ii) Investment by Specified Open Ended Debt Oriented Schemes of Canara Robeco Mutual Fund ("CRMF") and Canara Robeco Asset Management Co. Ltd. ("CRAMC") in units of Corporate Debt Market Development Fund ("CDMDF"):

As per the requirement of Regulation 43A of SEBI (Mutual Funds) Regulations, 1996, SEBI circular no. SEBI/HO/IMD/PoD2/P/ CIR/2023/128 dated July 27, 2023 on 'Framework for Corporate Debt Market Development Fund ("CDMDF")' and SEBI circular no. SEBI/HO/IMD/PoD2/P/ CIR/2023/129 dated July 27, 2023 on 'Investment by mutual fund schemes and Asset Management Companies (AMCs) in units of CDMDF', following specified open ended debtoriented schemes of Canara Robeco Mutual Fund ("CRMF") and Canara Robeco Asset Management Co. Ltd. ("CRAMC") shall invest such percentage of net assets in the units of the CDMDF:

Sr. No.	Name of specified open ended debt-oriented schemes of CRMF:
1.	Canara Robeco Dynamic Bond Fund
2.	Canara Robeco Savings Fund
3.	Canara Robeco Income Fund
4.	Canara Robeco Liquid Fund
5.	Canara Robeco Conservative Hybrid Fund
6.	Canara Robeco Ultra Short Term Fund
7.	Canara Robeco Short Duration Fund
8.	Canara Robeco Corporate Bond Fund
9.	Canara Robeco Banking and PSU Debt Fund

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ("AIF") in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility at the time of market dislocation to benefit the wider corporate debt market. The primary motive to set up a backstop facility is to instill confidence amongst the participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. Further, in times of market dislocation, the aforesaid specified debt-oriented schemes of CRMF shall have access to sell corporate debt securities held in the portfolio and CDMDF shall purchase listed corporate debt securities from the said schemes. The trigger and period for which the backstop facility will be open shall be as decided by SEBI.

iii) Risks Factors Associated with Creation of Segregated Portfolio:

Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer. Security comprising of segregated portfolio may not realise any value. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

iv) Liquidity Risk Management Framework:

AMFI vide Best Practice Circular dated October 12, 2022 has provided the following liquidity management tools. The said tools have been incorporated in the Liquidity Risk Management Policy which has been approved by the Investment Committee & Executive Risk Management Committee of the AMC, the Board of Directors AMC and Board of the Trustees of Mutual Fund.

Liquidity Management Tool	Brief Description			
Potential Risk Matrix Circular & Risk-o-meter Circular	The maximum risk that a scheme will run as per design and a measurement of that risk on a regular basis. Remedial measures also in place in case any of the design boundaries are breached.			
LRM Circular	Defines Liquidity Risk arising from the liability side and covers all potential liquidity risk scenarios upto 99% confidence interval. Has remedial measures both fo managing this risk on an ongoing basis (LRaR & LCRaR) as well as action plan in case there is a difference between actual outcome and projected outcome.

CANARA ROBECO

Additional Information in certain jurisdictions may be restricted or totally prohibited due to registration requirements and accordingly, persons who come into possession of this Scheme Information Document or Statement of Additional Information are required to inform themselves about and to observe any such restrictions and / or legal compliance requirements.

- The AMC, Trustees or the Mutual Fund have not authorized any person to issue any advertisement or to give any information or to make any representations, either oral or written, other than that contained in this Scheme Information Document or the Statement of Additional Information or as provided by the AMC in connection with this offering. Prospective Investors are advised not to rely upon any information or representation not incorporated in the Scheme Information Document or Statement of Additional Information or as provided by the AMC as having been authorized by the Mutual Fund, the AMC or the Trustees.
- Mutual Fund, its Trustees, AMC, its directors, its employees & Sponsors shall not be liable for any of the tax consequences that may arise, in the event that the Scheme is wound up for the reasons and in the manner provided in 'Statement of Additional Information (SAI)'.
- Redemption due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. Mutual Fund, their Trustees, AMC, its directors, its employees & Sponsors shall not be liable for any such tax consequences that may arise due to such redemptions.
- The liquidity of the Scheme's investments inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemptions or of a restructuring of the Scheme's investment portfolio, there may be delays in the redemption of units. Please refer to the section on "Right to limit repurchases".
- The value of the Scheme's investments may be affected by factors affecting capital markets generally, such as price and volume volatility in the stock markets, interest rates, currency exchange rates, foreign investments, changes in government policy, political, economic or other developments and closure of the stock exchanges. The NAV of the Scheme will be sensitive to changes in Interest /Bank / Prime Lending Rates. In case of investment in Money Market Instruments and in Central / State Govt. Securities by the Scheme, an increase in the Interest / Bank / Prime Lending Rates will impact the market value of existing investments leading to decrease in the Scheme's NAV.
- Debt securities are subject to the risk of an issuer's inability to meet principal and interest payments on the obligations (Credit Risk). Debt securities may also be subject to price volatility due to such factors as interest sensitivity, market perception or creditworthiness of the issuer and general market liquidity (Market Risk). While it is the intention of the Investment Manager to invest primarily in highly rated debt securities, the Scheme may from time to time invest in higher yielding, lower rated securities but not below investment grade and also in un-rated securities subject to provisions and restrictions laid down by SEBI, which would enhance the degree of risk. Changes in Government Policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme.
- The NAV of the scheme may be affected by the changes in the general market conditions, factors and forces
 affecting capital market in particular, level of interest rates, various market related factors, settlement
 periods and transfer procedures. If a Unit Holder invests in the scheme and acquires a substantial portion of
 the scheme units, the repurchase of units by the Unit Holder may have an adverse impact on the units of the
 schemes because the timing of such repurchase may impact the ability of other Unit holders to repurchase
 their units.
- The tax benefits described in this SID and SAI are as available under the present taxation laws and are available subject to relevant conditions. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India as on the date of this Scheme Information Document and the Unit holders Investors should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no

guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor is advised to consult his/her own professional tax advisor.

- If a Unit holder invests in the schemes and acquire a substantial portion of the scheme units. The repurchase of units by the Unit Holder may have an adverse impact on the units of the schemes, because the timing of such repurchase may impact the ability of other Unit holders to repurchase their units.
- The AMC and/ or its Registrars & Transfer Agent (RTA) reserve the right to disclose/share Unit holder's details of folio(s) and transaction details there under with the following third parties:
 - a) RTA, Banks and/or authorized external third parties who are involved in transaction processing, dispatching etc., of the Unitholder's investment in the Scheme;
 - b) Distributors or sub-brokers through whom the applications are received for the Scheme;
 - c) Any other organizations for compliance with any legal or regulatory requirements or to verify the identity of the Unitholders for complying with anti-money laundering requirements.
- The AMC may consider the overall level of risk of the portfolio; invest in lower rated / un-rated securities, offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute risk of the portfolio.
- Any disruption in the normal functioning of the Debt market or extreme illiquidity in any one of the Scheme's Securities, may affect the ability of The Fund Manager to buy or sell freely in the market. In the event of a large number of repurchase requests, the time taken by the Scheme for repurchase may become significant.
- It may be noted that no prior intimation/indication would be given to investors when the composition asset allocation pattern of the Scheme undergo changes within the permitted band as mentioned in this document. In the event of a large number of repurchase requests, the time taken by the Scheme for repurchase may become significant.
- Investors should study this Scheme Information Document carefully in its entirety and should not construe the contents hereof as advice relating to legal, taxation, investment or any other matters. Investors may, if they wish, consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming Units, before making a decision to invest/redeem Units. Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the event of winding up of the Scheme or for any amendment in tax laws that may affect the tax benefits available under the Scheme. The tax benefits are based on the present laws and rules in force.

21. <u>Real Time Gross Settlement (RTGS) & National Electronic Funds Transfer (NEFT)</u>: CRAMC provides the facility of 'Real Time Gross Settlement (RTGS)' & 'National Electronic Funds Transfer (NEFT)' offered by Reserve Bank of India (RBI), which aims to provide credit of redemption and dividend payouts (if any) directly into the bank account of the Unit holder maintained with the banks (participating in the RTGS/NEFT System). Unit holders can check the list of banks participating in the RTGS/NEFT System from the RBI website i.e. www.rbi.org.inor contact any of our Investor Service Centres.

However, in the event of the name of Unit holder's bank not appearing in the 'List of Banks participating in RTGS/NEFT' updated on RBI website www.rbi.org.in, from time to time, the instructions of the Unit holder for

remittance of redemption/ dividend (if any) proceeds via RTGS/NEFT System will be discontinued by CRMF/CRAMC without prior notice to the Unit holder and the payouts of redemption / dividend (if any) proceeds shall be effected by sending the Unit holder(s) a cheque / demand draft.

For more details on NEFT or for frequently asked questions (FAQs) on RTGS/NEFT, Unit holders are advised to visit the RBI website www.rbi.org.in.

<u>Electronic Clearing Service (ECS)</u> (available only in respect of dividend payments):

Investors who have opted for the ECS facility of RBI for dividend payment will receive a direct credit of the amount due to them in their mandated account whenever the payment is made through ECS. A separate advice regarding credit of amount(s) via ECS will be sent to the unit holder. It should be noted that while CRMF will make all efforts, there is no commitment that this facility will be made available to all desirous investors.

Applicants in cities not covered under ECS facility will receive dividend payments, if any by cheques or demand drafts and the same will be mailed to the Unitholders. The ECS Facility is available only in respect of dividend payments and not in the case of Redemption of Units. Therefore, the Investors will receive their redemption / dividend proceeds (if any) directly into their bank accounts in the following order:

- (i) In case the bank account of an investor is covered under RTGS/ NEFT system offered by the RBI then the payment of redemption / dividend proceeds (if any) shall be effected via RTGS/NEFT mechanism only.
- (ii) The facility for payment of dividend proceeds, if any via ECS shall be effected only in case the bank account of an investor is not covered under the RTGS/ NEFT system.

Each of the above facilities aims to provide direct credit of the redemption proceeds and dividend payouts (if any) into the bank account of the Unit holder and eliminates the time lag between despatch of the cheque, its receipt by the Unit holders and the need to personally bank the instrument and await subsequent credit to the Unit holders account. Further, the potential risk of loss of instruments in transit through courier/post is also eliminated. Each of the said facility as a mode of payment is faster, safer and reliable.

In case the bank account as communicated by the Unit holder is with any of the banks participating in the RTGS/NEFT System offered by RBI, CRAMC shall automatically extend this facility to the Unit holders provided unitholders have furnished all requisite information to CRAMC to receive such credits.

CRMF/CRAMC shall not be held liable for:

- any losses / claims, etc. arising on account of processing the credit via RTGS/NEFT/ECS of redemption / dividend proceeds on the basis of Bank Account details as provided by the unit holder in the Application Form.
- delayed receipt /non receipt of redemption /dividend amount for reason of incomplete /inaccurate information provided by the unit holders.

However, if the Unit holders are not keen on availing of any of the said facilities and prefer receiving cheques/demand drafts, Unit holders may indicate their intention in the Application Form in the space provided specifically. CRAMC would then ensure that the payouts are effected by sending the Unit holders a cheque / demand draft. In case of unforeseen circumstances, CRAMC reserves the right to issue a cheque/demand draft.

22. Default Plan / Option

In case of valid applications received the default plan will be captured based on below table :

CRAMC shall contact and obtain the correct ARN code within 30 calendar days of the receipt of the application form from the investor/ distributor. However, if value of demerged company is greater or equal to the value of the demerged company before demerger, then the resulting company would be valued at zero. ii. Where there are more than one resulting companies along with the demerged company and all or some resulting companies are unlisted, the resulting companies will be valued by residual price methodology which would be, traded value of the demerged company on the day before the demerger less value of the demerged company immediately post demerger. 	ii. In case, the merging / amalgamating companies being unlisted, valuation of resulting companies would be valued on the principles of fair valuation as guided by the valuation committee.
	If the above companies remained unlisted for more than 3 months, the Valuation Committee to decide on application of illiquidity discount as deemed appropriate on case to case basis. However, if the Valuation committee is of the opinion that a fair valuation has not been achieved in certain cases by applying the above guidelines, it reserves the right to decide on an alternate method of fair valuation, post considering facts on a case to case basis. Further, guidance from valuation committee would be sought for any exceptional cases not covered above.
Thinly Traded	 In line with the valuation formula prescribed under SEBI regulations for valuation, Valuation will be computed on the basis of average of book value and the price computed on the basis of the PE ratio (discounted by 75% i.e., 25% of industry average PE), further discounted for illiquidity. Atleast a total of 50,000 shares are traded in the preceding 30 days or:- 5. Trading volume of Rs.5 lacs is achieved in the preceding 30 days.
	SEBI Circular No. MFD/CIR/03/526/2002 dated May 9, 2002 has prescribed the method of valuation for unlisted equity securities. These guidelines are similar to the guidelines issued by SEBI for non-traded / thinly traded securities mentioned above except the following:
	Computation of Net worth per share as lower of (a) and (b):
	(a) i) Net worth of the company = Paid up share capital + Reserves other than Revaluation reserve - Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses.
	ii) Net worth per share = (Net worth of the company / Number of paid up shares).
	(b) i) Net worth of the company = Paid up capital + Consideration on exercise of Option/Warrants received/receivable by the company + free reserves other than Revaluation reserve – Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses.
Unlisted	Net worth per share = (Net worth of the company/{Number of paid-up shares + number of shares that would be obtained on conversion/exercise of outstanding warrants and options}).
	If the net worth of the company is negative, the share should be marked down to Zero.
	Computation of fair value per share to be considered for valuation at 15 % discount for illiquidity. [(Net worth per share + capitalized value of EPS) / 2] * 0.85
	In case the latest balance sheet i.e. balance sheet prepared within nine months from the close of the accounting year of the company, is not available (unless the accounting year is changed) the shares should be valued as zero.
	At the discretion of the AMC and with the approval of the Valuation Committee, unlisted equity scrip may be valued at a price lower than the value derived using the aforesaid methodology.

	2. If prices from only one valuation agency are received within the pre-agreed TAT, those prices will be used for IST pricing;		
	3. If prices are not received from any of the valuation agencies within the pre-agreed TAT, the IST pricing will be arrived at using the following methodology:		
	At weighted average YTM taking into account all trades done up to that particular point of inter scheme transfer.		
	For securities with residual maturity <= 30 days: All trades with minimum traded lot of INR 50 crores value or more will be aggregated for same or similar security on a public platform.		
Inter scheme	For securities with residual maturity > 30 days : All trades with minimum traded lot of INR 25 crores of face value or more will be aggregated for same or similar security on a public platform.		
Transfers debt / MMI securities	Criteria for identifying similar securities: Similar security should be identified by the following waterfall logic, Provided the maturity dates are within the same calendar guarter:		
	 Same issuer with maturity date within ± 3 days of maturity date of security for inter-scheme transfer shall be considered first. If no such instance is available, then Step 2 to be followed: Example: For inter-scheme transfer of Punjab National Bank CD maturing on 15-Jun-2021, all secondary 		
	market trades of Punjab National Bank CD maturing within 12-Jun-2021 to 18-Jun-2021 will be considered first		
	2. Similar security from a different issuer within the same category (PSU Bank, Private Bank or Financial Institution, manufacturing, NBFC – broking, NBFC non-broking etc.) and similar credit rating(long term/short term), with maturity date within ± 3 days of maturity date of security considered for inter-scheme transfer		
	■ Example: For inter-scheme transfer of Punjab National Bank CD maturing on 15-Jun-2021, all secondary market trades of similar public sector bank CDs maturing within 12-Jun-2010 to 18-Jun-2021 will be considered.

These indicative haircuts shall be applied on the date of credit event i.e. migration of the security to sub-investment grade and shall continue till the valuation agencies compute the valuation price of such securities. Further, these haircuts shall be updated and refined, as and when there is availability of material information which impacts the

	haircuts. The indicative haircut rate that is applied to the principal will be applied to the accrued				
	interest also.				
	5. In case of trades during the interim period between date of credit event and receipt of valuation				
	price from valuation agencies, traded price will be considered if it is lower than the price post				
	standard haircut. The said traded price shall be considered for valuation till the valuation price is				
	determined by the valuation agencies.				
	6. In case of trades after the valuation price is computed by the valuation agencies as referred above				
	and where the traded price is lower than such computed price, such traded price shall be				
	considered for the purpose of valuation and the valuation price will be revised accordingly.

	investment grade provided by the valuation agencies, the procedure as mentioned in SEBI circular				
	No. SEBI/HO/IMD/DF4/CIR/P/2019/41 dated March 22, 2019 shall be followed.				
	8. In case of securities classified as below investment grade but not default, interest accrual will				
	continue with the same haircut applied to the principal. In case of securities classified as default,				
	no further interest shall be made. Any recovery will first be adjusted against the outstanding				
	interest recognized in the NAV and any balance shall be adjusted against the value of principal				
	recognized in the NAV. Any recovery in excess of the carried value in the NAV will be applied first				
	towards amount of interest written off and then towards amount of principle written off.				
	Changes in terms of investment: While making any change to terms of an investment, Mutual Funds shall adhere to the following

	4. Any put option inserted subsequent to the issuance of the security shall not be considered for the				
	purpose of valuation and original terms of the issue will be considered for valuation.				
	 Upfront Fees on all trades (including primary market trades), by whatever name called, will be considered by the valuation agencies for the purpose of valuation of securities. 				
1.6.1.5	2. Details of such upfront fees will be shared with the valuation agencies on the trade date to enable them

COMPUTATION OF NAV

A. Policy of computation of NAV

The Mutual Fund shall compute the Net Asset Value (NAV) of each scheme in accordance with SEBI (Mutual Funds) Regulations, 1996. The NAV of the Scheme shall be calculated on all business days. The computation of NAV, valuation of securities / assets, accounting policies and standards would be in conformity with the SEBI (Mutual Funds) Regulations, 1996 and guidelines issued from time to time

The NAV per unit under the Scheme shall be calculated as follows:

The price arrived shall be rounded off up to two decimals. AMC reserves the right to calculate NAV more than two decimal places.

An Illustration:

Assume that the Market or Fair Value of Scheme's investments is Rs. 1,00,00,000; Current asset of the scheme is Rs.25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the scheme are 5,00,000.

Thus, the NAV will be calculated as:

NAV = 1,00,00,000 + 25,00,000 - 15,00,000

5,00,000

Therefore, the NAV of the scheme is Rs. 22.0000

B. Policy for computation of NAV in foreign securities

Computation of NAV in case of investment in foreign securities: On the valuation day, all the assets and liabilities denominated in foreign currency will be valued in Indian Rupees. The valuation price of the security will be converted to INR based on a reference rate provided by the designated agency at the close of banking hours in India. If required, the AMC may change the source of determining the exchange rate. The Fund shall value its investments according to the valuation norms as specified in the Eighth Schedule of the Regulations, or such guidelines / recommendations as may be specified by SEBI from time to time.

C. Procedure in case of delay in disclosure of NAV

The AMC will calculate the NAV of the Scheme on every Business Day. The AMC shall prominently disclose the NAVs of the Scheme under a separate head on the website of the Fund (www.canararobeco.com) and on the website of AMFI (www.amfiindia.com) before 11.00 p.m. on every Business Day. In case of any delay, the reason for such delay would be explained to AMFI in writing. Mutual Funds shall report in the quarterly Compliance Test Reports (CTRs) the number of days when mutual funds were not able to adhere to the above mentioned time limit for uploading their NAVs on the AMFI website with reasons thereof and the corrective action taken by the AMC to reduce the number of such occurrences.

In case the NAVs are not available before the commencement of business hours on the following day due to any reason, Mutual Funds shall issue a press release giving reasons for the delay and explain when they would be able to publish the NAVs

Transmission of Units in close ended schemes and ELSS

In the event of the death of the unitholder under ELSS, the nominee or legal heir, shall be able to withdraw the investment under ELSS only after the completion of one year from the date of allotment of the units to the investor, but before completion of three years' lock-in. In other words, the three years' lock-in period is relaxed / reduced to one year from the date of allotment of the units in such cases.

Repurchase of Units under Close Ended Scheme upon death of the Unitholder(s):

As per Regulation 33(1) of SEBI (Mutual Funds) Regulations, 1996, Units of a close ended scheme, other than those of an Equity Linked Savings Scheme, launched on or after the commencement of the Securities and Exchange Board of India (Mutual Funds) (Amendment) Regulations, 2009 shall not be repurchased before the end of maturity period of such scheme.

Thus, in case of death of the sole unit holder or all unitholders (in case of joint holding) in a close ended scheme, the claimant (Le., the *nominee* or *the legal heir*) shall be able to withdraw the investment only after maturity period of the scheme.

However, the transmission of units in favour of the claimant may be completed before the maturity date of the scheme, provided the claimant is otherwise eligible to hold the Units under the respective scheme and has completed the KYC process etc. If the claimant desires to redeem the investment held by the deceased unit holder in the scheme before the maturity date, he/she may be advised to -

(i) Complete the transmission procedure first;

(ii) Apply for dematerialisation of the Units (after the Units are transmitted in favour of the claimant); and

(iii) Subsequently, sell the dematerialised units in the secondary market.

Pursuant to SEBI Circular no. CIR/MD/DF/10/2010 dated August 18, 2010 it is clarified that, in order to facilitate transferability of units held in one demat account to another demat account, units of CRMF schemes (other than open ended ELSS scheme) held in demat form shall be freely transferable.

Treatment of unclaimed amounts (including unclaimed dividend/ redemption proceeds)

On receipt of a Transmission Request Form, CRAMC/RTA shall ascertain whether there are any unclaimed amounts, including units in the dedicated Plan under Liquid Schemes/ Money Market Mutual Fund (created specifically for deployment of the unclaimed amounts) to the credit of the deceased unitholder. CRAMC/RTA shall also ascertain whether there is any unclaimed redemption/dividend or refund amount payable to the deceased unit holder, which is yet to be transferred to such separate/ dedicated Plan under Liquid Funds for unclaimed amounts. If there is any such unclaimed amounts and/or units, such amount shall be paid by direct credit to the claimant's registered bank account via NEFT/RTGS/Direct Fund transfer etc. immediately **upon the successful completion of the transmission process**, with a suitable intimation to the claimant giving complete details / account statement.

Clarifications:

- 1. The formats of the Affidavit, Bond of Indemnity, NOC are made available on the website of CRMF.
- 2. In case of death of the 1st holder, if there are two surviving joint holders, the surviving 2nd holder shall be treated as the new primary / 1st holder. Self-attested copy of PAN card of claimant(s) is mandatory and Name(s) as per PAN card should match with claimant's name(s). Additionally, CRAMC/ RTA validate such PAN independently with Income Tax database to check the validity of PAN, status and name, including PAN-Aadhaar linking.

- 3. In case the claimant is a resident of Sikkim state, appropriate Id. proof should be obtained in lieu of PAN card and the AMC/RTA may rely on the said document for processing the claim.
- 4. KYC status of the claimant(s) should be 'Verified' / 'Complied'. Else, the original KYC form duly filled, supported by the documentary proof should be obtained. If Aadhaar is provided as OVD, transmission request shall be processed only after KYC status is updated in KRA system as valid.
- 5. If the death certificate is issued through online mode, CRAMC/ RTA will validate the same through online mode wherever possible and have access to the relevant site.
- 6. ID proof (PAN/Redacted Aadhaar/Voter ID/Passport or any other valid OVD as per PMLA guidelines] of the deceased person should be obtained along with the transmission request (as a risk mitigation measure).
- 7. If the claimant produces the original document for verification at front office of CRAMC branch, the CRAMC official shall verify the original thereof and affix the 'Original Seen & Verified' stamp suitably.
- 8. If the original is not produced for verification, the photocopies of the supporting documents submitted for transmission of units, such as the death certificate of the deceased, birth certificate of the minor, Probate of Will, Succession Certificate, Letter of Administration etc. shall be duly attested by a Notary Public or a Gazette Officer.
- 9. Apart from the name of the deceased, any one other factor (such as Father's name / Spouse's Name, Address] as per the death certificate should match with the records available in the respective folio(s) or as per KYC records of the deceased person / claimant(s). If there is any mismatch, the claimant should be advised to substantiate with suitable evidence.
- 10. Bank mandate information provided at the time of transmission should mandatorily subjected to 'penny drop' validation [IMPS] in addition to the documentary proof submitted and the name should match as per the bank records vs. folio records. If the name is not matching or name not found as part of the penny drop reverse feed, suitable notification should be sent to the claimant to establish further documentary evidence / proof, post confirmation from them and evidence is found to be satisfactory, then transmission process can be allowed.
- 11. There should be a cooling off period of 10 business days between the date of transmission of units and subsequent redemption as being done for change of bank mandate.
- 12. CRAMC will send suitable communication to the registered (existing) address as well [if different from the claimant's address] as a fraud prevention measure.
- 13. Where the units are to be transmitted to a minor beneficiary, various documents like KYC, PAN, Indemnity should be obtained from the guardian of the minor nominee / legal heir. Bank attestation of the signature of the guardian of the minor should be as per the bank account of the minor or the joint account of the minor with the guardian.
- 14. In case of multiple nominees/ claimants, the monetary threshold of more than ₹ 5 lakh for the purpose of obtaining the Indemnity Bond shall be determined on the basis of the aggregate value of the Units under all the folios for which the transmission request is being submitted as per the latest NAV as on the date of receipt of the claim, before dividing / splitting the claim amongst multiple nominees or claimants/ surviving co-parceners.
- 15. If the total value of the Units being transmitted exceeds ₹5 lakhs, Identity proof such as copy of PAN or redacted Aadhaar card or passport of all legal heirs signing the NOC other than claimant/s i.e. legal heirs other than the claimant mentioned in the Probate or Letters of Administration or Succession Certificate, should be obtained.

- 16. Where there are more than one claimant (nominee or legal heir) in a folio or set of folios, the nominees / legal heirs should be encouraged/ requested to submit the transmission request together so that all the Units held by the deceased unitholder(s) could be transmitted in one-go to for operational efficiency and convenience.
- 17. In such cases where the deceased was the 1st holder in respect any one of the folios/funds, units in all other holdings across all other folios/schemes, where the deceased was the 1st unitholder shall be 'Stop' marked/blocked against any further transactions on the basis of PAN or PEKRN.
- 18. If the deceased unitholder(s) held units in multiple folios, e.g., as the 1st holder(s) in some folios and as the joint holder in others, a single Transmission Request form may be accepted for operational ease, provided all the deceased holders are common across the multiple folios (irrespective of the order of names of the deceased) AND the nominee(s) / claimant(s) is/are also common/same across ALL the folios.
- 19. Once a transmission request is received, CRAMC/RTA shall determine if the deceased unitholder had any unit holdings under any other scheme / folio, and put a flag in the system against all other folios of the deceased unitholder, basis PAN / PEKRN with a suitable communication to the surviving unitholders / nominee/s (if any, registered against the folios) to submit the claim form with required documents in respect of the remaining folios.
- 20. The process and documentation for transmission of units where the claimant / nominee is a mentally unsound person, shall be the same as applicable to a Minor claimant, except that the Guardian shall be a court appointed guardian. Additionally, a Medical Certificate from an appropriate registered medical practitioner may be obtained regarding the mentally unsound person.
- 21. If the transmission amount is for more than ₹ 5 Lakh, as an operational risk mitigation measure, the signature of the Nominee/ Claimant shall be attested only by a Notary Public or a JMFC (and not banker's attestation). For this purpose, space has been provided for signature in the transmission request form below the signature of the claimant.

Information pertaining to Investments by the Schemes of the Fund

1. Derivative strategies

• Risk associated with investing in Derivatives:

As and when Schemes trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies.

The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme's original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme's portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme's returns and increase the Scheme's potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

• Trading in derivatives has the following risks:

- a) An exposure to derivatives in excess of the hedging requirements can lead to losses.
- **b)** An exposure to derivatives can also limit the profits from a genuine investment transaction.
- c) Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.

d) Particular Risks of Exchange Traded Derivative Transactions

The securities exchange on which the shares of the Scheme may be listed may have the right to suspend or limit trading in all securities which it lists. Such a suspension would expose the Scheme to losses and delays in its ability to redeem shares of the Scheme.

e) Stock Market Fluctuations

Investors may note that the value of their investment may fall as well as rise and they may get back less than they originally invested. The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.

f) Income Distribution cum Capital Withdrawal (Dividends)

The Scheme may distribute not only investment income, but also realized capital gains or capital. Where capital is distributed, this will result in a corresponding reduction in the value of shares of the Scheme, and a reduction in the potential for long-term capital growth.

g) Warrants

The Scheme may invest in warrants, the values of these warrants are likely to fluctuate more than the prices of the underlying securities because of the greater volatility of warrant prices.

h) Futures and Options

The Scheme may use options and futures on securities, indices and interest rates for the purpose of efficient portfolio management. Transactions in futures and options carry a high degree of risk. A relatively small market movement will have a proportionately larger impact which may work for or against the investor. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.

i) Listing

In case the shares of the Scheme are listed, the exchanges on which those shares are listed will have no responsibility for the contents of any prospectus issued by the Scheme or will make no representations as to its accuracy or completeness and expressly disclaim any liability whatsoever for any kind of loss arising from or in reliance upon any part of any such prospectus.

Hedging and Derivatives:

The schemes intends to use derivatives as may be permitted under the Regulations from time to time. The same shall be within the permissible limit prescribed by SEBI (Mutual Fund) Regulations from time to time.

As a part of the fund management process, the AMC may use appropriate derivative instruments in accordance with the investment objectives of the Scheme and in accordance with SEBI Regulations as may be applicable from time to time.

SEBI has also vide Para 7.5 of SEBI Master Circular for Mutual Funds dated May 19, 2023 permitted Mutual Funds to participate in the derivatives market at par with Foreign Institutional Investors (FII). Accordingly, Mutual Funds shall be treated at par with a registered FII in respect of position limits in index futures, index options, stock options and stock futures contracts. The Fund shall comply with the guidelines issued by SEBI and amendments thereof issued from time to time in derivative trading.

Equity / Equity Related Derivative Instruments:

Index futures are meant to be an efficient way of buying / selling an index compared to buying/selling a portfolio of physical shares representing an index for ease of execution and settlement. Index futures can be an efficient way of achieving the Scheme's investment objective. Index futures may avoid the need for tracking in individual components of the index, which may not be possible at times, keeping in mind the circuit filter system and the liquidity in some of the scrips. Index futures can also be helpful in reducing the transaction costs and the processing costs on account of ease of execution of one trade compared to several trades of shares of an index and will be easy to settle compared to physical portfolio of shares representing an index.

Stock futures could also be used as an alternative to investing in particular stocks comprising an index where either the liquidity is low or the impact cost is high.

Basic Structure of an Index Future

Index Futures are instruments designed to give exposure to the equity market indices. The Bombay Stock Exchange and the National Stock Exchange of India Limited trade in index futures. The pricing of an index future is the function of the underlying index and short-term interest rates.

Illustration: Spot Index: 1070 1 month Nifty Future Price on day 1: 1075 Fund buys 100 lots Each lot has a nominal value equivalent to 200 units of the underlying index. Let us say that on the date of settlement, the future price = Closing spot price = 1085 Profits of the Fund = (1085-1075)* 100 lots * 200 = Rs.200,000.

Similarly, the fund can suffer a loss if the future price is lower than the contracted price. Let us say that in the above example, on the date of settlement the future price = Closing Spot Price = 1060.

Loss for the Fund = (1060-1075)* 100 lots * 200 = (Rs.300,000)

Please note that the above example is given for illustration purposes only.

The net impact for the Fund will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity) plus interest costs on funds that would otherwise be invested in stocks comprising the index. The risks associated with index futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and/or mispricing of the future at any time during the life of the contract.

Strategy Number No. 1

Using Index Future to increase percentage investment in equities.

The strategy will be used for the purpose of generating returns on idle cash, pending its investment in equities. The Scheme is open ended in nature and subject to daily inflows. There may be a time lag between the inflow of funds and

their deployment in equities. If so desired, the AMC would be able to take immediate exposure to equities via index futures. The position in index futures may be reversed in a phased manner, as the funds are deployed in the equity markets.

Example:

The scheme has a corpus of Rs. 50 crores and there is an inflow of Rs. 5 crore in a day. The AMC may buy index futures contracts of a value of Rs. 5 crore. Later as the money is deployed in the underlying equities, the value of the index futures contracts can be suitably reduced.

Portfolio	Event	Equity Portfolio Gain(Loss) Rs. in Crs	Derivative Gain (Loss) Rs. in Crs.	Total Portfolio Gain/ (Loss) Rs. in Crs
Rs.50 Crore Equity exposure	10% rise in Equity Price	5	NIL	5
Rs. 50 Crore exposure + Rs. 5 Crore long position index futures	10% rise in Equity Price	5	0.5	5.5
Rs.50 crore Equity exposure	10% fall in Equity price	(5)	Nil	(5)
Rs.50 crore Equity exposure + Rs 5 crore long position index futures	10% fall in Equity price	(5)	(0.5)	(5.5)

RISKS:

- The strategy of taking a long position in index futures increases the exposure to the market. The long position is positively correlated with the market. However, there is no assurance that the stocks in the portfolio and the index behave in the same manner and thus this strategy may not provide gains perfectly aligned to the movement in the index.
- The long position will have as much loss as a gain in the underlying index, e.g. if the index appreciates by 10%, the future value rises by 10%. However, this is true only for futures contracts held till maturity. In the event that a futures contract is closed out before its expiry, the quoted price of the futures contract may be different from the gain/loss due to the movement of the underlying index. This is called the basis risk.
- While futures markets are typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time, for the Scheme to purchase or close out a specific futures contract.
- Similarly, the fund can use stock futures to reduce the cost of holding in the following manner:
- When stock futures are trading at a discount then the fund can buy stock in futures market instead of buying in the cash market. On expiry of the contract, both prices (spot and future) have to align. On expiry or as and when stocks start trading at a premium in the futures market the transaction can be reversed by selling the stock in futures and buying in the cash market.
- Fund can take advantage of arbitrage opportunities in the futures markets to reduce cost of holding. If stock futures are trading at a discount then the fund can sell its existing holding in cash market and buy in the futures market. The cash realized will earn interest while the overall cost of the holding stock will also come down. On expiry of contract both prices (spot and futures) have to align. On expiry or as and when the stock starts trading at a premium in the futures market, the transaction can be reversed by selling the stock in the futures and buying in the cash markets.

Strategy Number 2

Using Index Futures to decrease percentage investment in equities:

Similarly, in the case of a pending outflow of funds where a negative view is taken on the market, the Fund, in order to reduce exposure in equities may 'sell the index forward' by taking a short position in Index Futures. This position can be unwound over a period of time simultaneously selling the equity shares from the investment portfolio of the Scheme. The strategy of taking a short position in the index future is a hedging strategy and reduces the market risk and volatility of the portfolio. However, if the value of the index future rises, then, the fund would be adversely affected due to its short position in index futures.

Example: Assume that a scheme has an equity exposure of Rs. 100 crore. If the Fund Manager wishes to reduce the equity exposure to Rs. 50 crore for a short time, he should sell index futures contracts of Rs. 50 crore.

Portfolio	Event	Equity Portfolio Gain/(Loss) (Rs. In crore)	Derivatives Gain/(Loss (Rs. In crore)	Total portfolio Gain/(Loss) (Rs. In crore)
Without Hedge Rs.100 crore equity Exposure	10% fall in equity price	(10)	NIL	(10)
With Hedge Rs.100 crore	10% fall in equity	(10)	5	(5)
equity Exposure	prices			
Without Hedge Rs.100 crore		10	NIL	10
equity Exposure	prices			
With Hedge Rs.100 crore	10% rise in equity	10	(5)	5
equity Exposure	prices			

50% Hedge – contract value of Rs. 50 crore

The above example demonstrates that the Fund would benefit from the hedged position if the index future moves in the direction as expected by the Fund Manager. Similarly, the Fund would be adversely affected from the hedged position if the index does not move in the direction expected by the Fund Manager.

RISKS

- The strategy of taking a short position in index futures is a hedging strategy and reduces the market risk. The short position is negatively correlated with the market. However, there is no assurance that the stocks in the portfolio and index behave in the same manner and thus this strategy may not be a perfect hedge.
- The short position will have as much loss as a gain in the underlying index. e.g. if the index appreciates by 10%, the future value falls by 10%. However, this is true only for futures contract held till maturity. In the event that a futures contract is closed out before its expiry, the quoted price of the futures contract may be different from the gain/loss due to the movement of the underlying index. This is called the basis risk.
- While futures markets are more liquid, there can be no assurance that ready liquidity would exist at all points in time, for the Scheme to purchase or close out a specific future contract.

Strategy Number 3

Portfolio Protection Using Index Put:

The purchase of an index put option gives the scheme the option of selling the index to the writer of the put at a predetermined level of the index, called the strike price. If the index falls below this level, the scheme benefits from the rise in the value of the put option.

Similarly, as a stock hedging strategy, the purchase of a put option on the underlying stock would give the scheme the option to sell the stock to the writer of the option at the predetermined strike price. This would lead to a capping of the loss in value of a stock.

Example: Let us assume a scheme with a corpus of Rs. 100 crore. Let us also assume an index of 100. The scheme is fully invested (Rs. 100 crore in equities). The scheme purchases a put option on the index with a strike price of 95 for an assumed cost of Rs. 1 crore. The following table illustrates the portfolio returns:

% change in Index	Index Value	Equity Portfolio Value Rs. In crore	Option Value Rs. In crore	Cost of the Put Option Rs. In crore	Portfolio Value Rs. In Crore	% returns from portfolio
		Α	В	С	(A+B+C)	
10	110	110	0	(1)	109	9
5	105	105	0	(1)	104	4
(5)	95	95	0	(1)	94	(6)
(10)	90	90	5	(1)	94	(6)
(15)	85	85	10	(1)	94	(6)

A similar put option can be purchased on any individual stock and the downside can be capped.

RISKS:

• The table shows that the portfolio value will not fall below Rs. 94 crore, while the scheme benefits from any increase in stock prices. The table assumes perfect correlation between the equity portfolio and the index. However this may

not be the case. Therefore, the minimum portfolio value cannot be assured, but the loss is expected to be lower in a portfolio with a put option on the index, as compared to a normal portfolio.

- The put option would lead to a gain based on the difference between the strike price and the index level at expiration date, if positive. However, in case the option is reversed before the expiration date, the market price received on the sale of the option may be different from the price calculated.
- While liquidity exists in options markets, there can be no assurance that the ready liquidity would exist at all points in time, for the scheme to purchase or close out a specific options contracts.
- In the case of purchase of a stock put, the strategy is a perfect hedge on the expiration date of the put option. On other days, there may be (temporary) imperfect correlation between the share price and the put option, which can potentially take the stock value below the minimum under the hedge.

Similarly, the Fund can use stock futures to reduce the cost of holding in the following manner:

- When stock futures are trading at a discount then the fund can buy in futures market instead of buying in the cash market. On expiry of the contract, both prices (spot and futures) have to align. On expiry or as and when stocks starts trading at a premium in the futures market, the transaction can be reversed by selling the stock in futures and buying in the cash market.
- Fund can take advantage of arbitrage opportunities in the futures markets to reduce cost of holding. If stock futures are trading at a discount then the fund can sell its existing holding in cash market and buy in futures market. The cash realised will earn interest while the overall cost of holding stock will also come down. On expiry of contract both prices (spot and futures) have to align. On expiry or as and when the stock starts trading at a premium in the futures market, the transaction can be reversed by selling the stock in the futures and buying in the cash markets.

Strategy Number 4

The scheme could gain exposure to the equity markets through exchange traded call options. The investment team will evaluate the prevailing premium levels on the call options with tenure suitable to the scheme. The scheme could in such a case implement a buy and hold (passive investment) strategy for the equity index call options held or buy a series of shorter term equity index call options, thus the options strategy may be managed actively.

Example: Let us assume a scheme with a corpus of Rs. 100 crore. Let us also assume an index of 100. The scheme is invested about Rs. 99 crore in equities. The scheme purchases a call option on the index with a strike price of 100 for an assumed cost of Rs. 1 crore. Assuming the equity portfolio rises or falls by the same percentage as the index. The following table illustrates the portfolio returns:

% change In Index	Index Value	Equity Portfolio Value Rs. In crore	Option Value Rs. In crore	Portfolio Value Rs. In Crore	% returns from portfolio
		Α	В	(A+B)	
10	110	108.90	10	118.90	18.90
5	105	103.95	5	108.95	8.95
0	100	99	0	99	-1
(5)	95	94.05	0	94.05	-5.95
(10)	90	89.10	0	89.10	-10.90

A similar call option can be purchased on any individual stock and the upside potential can be augmented.

The rate of participation would depend on prevailing prices of call options and the Amount Available for investment in options.

	Scenario 1	Scenario 2	Scenario 3
Strike price	8100	8200	8300
Premium	1925	1850	1700
Premium as %age of strike price	23.77%	22.56%	20.48%
Amount Available for investment in options (assumed)	17%	17%	17%
Therefore, Rate of Participation is amount invested in options/premium	72%	75%	83%

RISKS:

- The strategy of taking a long position in call options increases the exposure to the market. The long position is positively correlated with the market. However, there is no assurance that the stocks in the portfolio and the index behave in the same manner and thus this strategy may not be provide gains perfectly aligned to the movement in the index.
- If the call options expire in the money, but not enough to compensate the premium paid, the returns of the option strategy could be less than the returns of the underlying equity market on maturity.
- Further, if the options expire out of money, the scheme will face a loss to the extent of the premium paid for options. In such case even if the equity market has a positive return during the tenure of the Scheme, the Scheme may not provide positive returns in line with the market.
- While liquidity exists in options markets, there can be no assurance that ready liquidity would exist at all points in time, for the scheme to purchase or close out a specific options contracts.
- The call option will have as much loss as a gain in the underlying index post deducting the option premium. However, this is true only for option contracts held till maturity. In the event that a option contract is closed out before its expiry, the quoted price of the option contract may be different from the gain/loss due to the movement of the underlying index.

Advantages of Equity Derivatives:

In times of volatility in the equity markets, derivatives provide much needed flexibility to hedge against this volatility. Some of the advantages of specific derivatives products are given below:

- Stock Index Futures can give exposure to the index. Appreciation in Index Investment in Stock Index Futures can give exposure to the index without directly buying the individual stocks, which make up the index. Appreciation in Index stocks can be effectively captured through investment in Stock Index Futures.
- The Scheme can sell futures to hedge against market movements without actually selling the underlying stocks it hold.
- By buying call options on the index, one can participate in the rise in the market, without actually buying individual stocks.
- By buying put options on the index, the Scheme can insulate the portfolio (assuming a perfect co-relation between portfolio and index which may not be the case) from the downside risk at a small cost.

Debt / Debt Related Derivatives:

The Scheme may use derivatives in accordance with SEBI Regulations. RBI has issued guidelines on Interest Rate Swaps (IRS) and Forward Rate Agreements (FRA) on July 7, 1999. These products were introduced for developing the nation's Debt Market.

Interest Rates Swaps (IRS):

All swaps are financial contracts, which involve exchange (swap) of a set of payments receivable by one party for another set of payments receivable by another party, usually through an intermediary. An IRS can be defined as a contract between two parties (Counter Parties) to exchange, on particular dates in the future, one series of cash flows (fixed interest) for another series of cash flows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cash flows need not occur on the same date.

Forward Rate Agreements (FRA):

An FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payment is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchanged.

The Scheme will use derivatives instruments for the purpose of hedging and portfolio balancing. Hedging does not mean maximization of returns but only reduction of systematic or market risk inherent in the investment.

Basic Structure of an Interest Rate Swap

An interest rate swap is an agreement between two parties to exchange future payment streams based on a notional amount. Only the interest on the notional amount is swapped, and principal amount is never exchanged.

In a typical interest rate swap, one party agrees to pay a fixed rate over the term of the agreement and to receive a variable or floating rate of interest. The counterparty receives a stream of fixed rate payments at regular intervals as described in the agreement and pays the floating rate of interest.

Illustration:

Fixed interest rate: 10% p.a. Variable Interest Rate : Over-Night MIBOR (variable) Notional Principal : Rs.10 crore Period of Agreement : 1 year Interest Frequency : Semi-annual

Suppose six month period from the value date of swap to the first payment date is 182 days and the daily compounded over-night MIBOR is say 8% p.a. on that date, the interest streams are as follows :

Fixed Rate Payment : Rs.10,00,00,000.00 x 182 x 10 / $365 \times 100 = Rs.49,86,301.36$ Variable Rate : Rs.10,00,00,000.00 x 182 x 8 / $365 \times 100 = Rs.39,89,041.09$ In the above example, the fixed rate payer will pay the variable rate payer a net amount of Rs.9,97,260.27 (Rs.49,86,301.36 - 39,89,041.09).

Likewise the second and final payment will depend upon the variable NSE MIBOR for the remaining 183 days and the interest stream of fixed rate for the said period, the difference of which will be settled between the parties at the expiry of the contract.

The above example illustrates the benefits and risks of using derivatives for hedging and optimising the investment portfolio. Swaps have its own drawbacks like counterparty risk, basis risk and settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Valuation of Derivative Products

The traded derivatives shall be valued at the closing price provided by the respective stock exchanges.

When a security is not traded on the respective stock exchange on the date of valuation, then the settlement price / any other derived price provided by the respective stock exchange.

The valuation of untraded derivatives shall be done in accordance with the valuation method for untraded investments prescribed in sub clauses (i) and (ii) of clause 2 of the Eighth Schedule to the Securities and Exchange Board of India (Mutual Funds) Regulations, 1996 as amended from time to time.

Exposure to Derivatives

Losses may arise as a result of using derivatives, but these are likely to be compensated by the gains on the underlying cash instruments held by the Scheme.

Risk associated with Derivatives trading:

The risk associated with index futures is similar to the one with equity investments. Additional risks could be on account of illiquidity and hence mispricing of the futures at the time of purchase. As and when the Scheme trades in the derivatives markets, there are risk factors and issues concerning the use of derivatives. Derivative products are specialised instruments that require investment techniques and risk analyses different from those associated with stocks. The use of a derivative requires understanding of the underlying instrument as well as that of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess risk that a derivative adds to the portfolio and the ability to forecast price movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks associated with trading in derivatives include the risks of mispricing or improper valuation of derivatives and inability of derivatives to correlate perfectly with underlying assets, indices.

The net impact for the Scheme will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity). Thus, profit or loss for the Scheme will be the difference between the closing price (which can be higher or lower than the purchase price) and the purchase price.

The Schemes will comply with provisions specified at para 12.24 and 12.25 of SEBI Master Circular dated May 19, 2023 as amended from time to time related to overall exposure limits applicable for derivative transactions as stated below:

- a) The cumulative gross exposure through equity, debt and derivative positions should not exceed 100% of the net assets of the scheme.
- b) The scheme may write options only under covered call strategy for constituent stocks of Nifty 50 or BSE Sensex and will fully comply with all the provisions of para 12.25 of SEBI Master Circular dated May 19, 2023 amended from time to time, in this regard.
- c) The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.

- d) Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure. SEBI vide letter dated November 3, 2021 to AMFI has clarified that Cash Equivalent shall consist of Government Securities, T-Bills and Repo on Government Securities.
- e) Exposure due to hedging positions may not be included in the above mentioned limits subject to the following
 - i. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.

2. Swing Pricing

Swing pricing framework for open ended debt schemes of Canara Robeco Mutual Fund

With a view of safeguarding the interest of small investors against any large redemptions, SEBI vide its circular SEBI/HO/IMD/IMD-II DOF3/P/CIR/2021/631 dated September 29, 2021 introduced provisions pertaining to Swing Pricing Framework for open ended debt schemes (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) with effect from **May 01, 2022**.

In view of the provisions mentioned in aforesaid circular, a mandatory full swing pricing framework, during market dislocation times (as and when declared by SEBI), is being introduced in all open ended debt schemes of Canara Robeco Mutual Fund (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) as given below:

Meaning of Swing Pricing:

Swing pricing refers to a process for adjusting a fund's Net Asset Value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity during the life of a fund, excluding ramp-up period or termination. In other words, Swing Pricing is an anti-dilution technique which helps funds manage liquidity risks internally by effectively passing on transaction costs to the unitholder/investors associated with that activity. In a liquidity-challenged environment, quoted bid/ask spreads and overall trading cost can widen and may not be representative of the executed prices that can be achieved in the market. In such circumstances, swing pricing can be a useful mechanism to contribute to protect the interests of existing investors, specifically from the dilution of their holdings; and contribute to protect the value of the investors capital.

Applicability of Swing Pricing Framework:

The swing pricing framework will be made applicable only for scenarios related to net outflows from the debt schemes.

SEBI will determine 'market dislocation' either based on AMFI's recommendation or suo moto. Once market dislocation is declared, it will be notified by SEBI that swing pricing will be applicable for a specified period.

Subsequent to the announcement of market dislocation, the swing pricing framework shall be mandated only for open ended debt schemes which:

- 3. Have "High" or "Very High" risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation) and
- 4. Potential Risk Class (PRC) cells A-III, B-II, B-III, C-I, C-II and C-III

Minimum swing factor for open ended debt schemes:

Following mandatory swing factor will be applied on redemption and subscription transactions in the above-mentioned schemes during market dislocation period announced by SEBI.

Minimum swing factor for open ended debt schemes							
Credit Risk of scheme \rightarrow	Class A	Class B	Class C				
Interest Rate Risk of	(CRV*>=12)	(CRV>=10)	(CRV<10)				
scheme ↓							
Class I: (MD<=1 year)	Nil	Nil	1.50%				
Class II: (MD<=3 years)	Nil	1.25%	1.75%				
Class III: Any Macaulay	1.00%	1.50%	2.00%				
Duration (MD)							

*CRV: Credit Risk Value

Applicability of Swing Pricing to Investors:

When swing pricing mechanism is triggered and swing factor is made applicable during market dislocation, both the incoming and outgoing investors shall get NAV adjusted for swing factor. Swing pricing shall be made applicable to all unitholders at PAN level, with an exemption for redemptions up to Rs. 2 lakhs for each mutual fund scheme for market dislocation.

Illustration on swing pricing - market dislocation as announced by SEBI:

When swing pricing is triggered, the NAV will be adjusted as follows:

Risk-O-meter	PRC	Computed NAV (Rs.)	Swing Factor Applied	Swing NAV (Rs.)
	A-III	14.0000	1.00%	13.8600
	B-II	14.0000	1.25%	13.8250
High /Von High	B-III	14.0000	1.50%	13.7900
High / Very High	C-I	14.0000	1.50%	13.7900
	C-II	14.0000	1.75%	13.7550
	C-III	14.0000	2.00%	13.7200

Disclosures pertaining to NAV adjusted for swing factor:

The scheme performance shall be computed based on scheme NAV before swing adjustment i.e. the unswung NAV.

Disclosures pertaining to NAV adjusted for swing factor along with the performance impact shall be made in the SIDs of respective schemes as per the format prescribed by SEBI and in scheme wise Annual Reports and Abridged summary and the same shall be disclosed on the website prominently only if swing pricing framework has been made applicable for the said mutual fund scheme.

The Swing Price Framework shall be subject to the provisions of circulars and guidelines laid down by SEBI and AMFI from time to time.

3. Short selling / stock lending

Stock lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on expiry of the stipulated period.

The Fund may carry out stock/securities lending activity under any of its Schemes, in order to augment its income. Stock/securities lending may involve the risk of default such as loss, bankruptcy etc. on part of the borrower. However, this is unlikely to happen if the stock/securities lending is carried out for stocks/securities which are in dematerialised form and through an authorised stock/securities lending Scheme, subject to appropriate regulations. The Investment Manager perceives such situations to be exceptional in nature. Although the Stock Market in India is still developing, considering the good demand for listed/quoted Equity Shares of reputed companies, the Scheme(s) may choose to meet repurchase needs through temporary borrowings, within the permissible limits.
