**I. INTRODUCTION****A. RISK FACTORS****Standard Risk Factors:**

- I. Mutual Fund Investments are subject to market risks, read all scheme related documents carefully.
- II. Mutual Funds and securities investments are subject to market risks and there can be no assurance or guarantee that the objectives of the Scheme will be achieved.
- III. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- IV. As the price / value / interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down.
- V. The past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- VI. The name of the Scheme does not in any manner indicate either the quality of the Scheme, its future prospects or returns.
- VII. Canara Bank and ORIX Corporation Europe N.V (formerly Robeco Groep N. V.), being the Sponsors, are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 10 Lacs made by it towards setting up Canara Robeco Mutual Fund.
- VIII. The present scheme is not a guaranteed or assured return scheme.

**Scheme Specific Risk Factors:**

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

**Risks associated with investments in Fixed Income Securities**

- I. **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments and derivatives run price-risk or interest-rate risk. Generally, when interest rate rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
- II. **Credit Risk:** In simple terms this risk means that the issuer of a debenture/bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of the security may go down when the credit rating of an issuer goes down. It must, however, be noted that where the Scheme/s has invested in Government securities, these are considered zero credit risk securities due to sovereign nature of securities.
- III. **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- IV. **Liquidity Risk:** This refers to the ease with which a security can be sold at or near to its valuation or yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted in the secondary market.
- V. **Basis Risk:** This risk arises from potential risk in mismatched hedging position. Basis risk occurs when a hedge is imperfect, so that the losses in an investment are not exactly offset by the hedge position. If a floating rate instrument is being hedged through a swap or interest rate future (IRF) and the hedge is imperfect, than losses in the investment position will not be fully offset by the swap/IRF position, leading to adverse impact on the NAV

- VI. **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- VII. **Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment, due to illiquid nature of these types of security. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.
- VIII. **Settlement Risk:** Fixed income securities run the risk of settlement when a security transaction done by the dealer for the fund, is not settled either due default by the counterparty or due to some technical issues in the settlement platform. This may lead to liquidity issues for the fund and may impact NAV adversely.
- IX. **Pre-payment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

#### **Risk associated with investing in Derivatives**

As and when Schemes trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies.

The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme's original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme's portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme's returns and increase the Scheme's potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

**Trading in derivatives has the following risks:**

- a. Derivatives in excess of the hedging requirements can lead to losses.
- b. An exposure to derivatives can also limit the profits from a genuine investment transaction.
- c. Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.
- d. **Particular Risks of Exchange Traded Derivative Transactions:** The securities exchange on which the shares of the Scheme may be listed may have the right to suspend or limit trading in all securities which it lists. Such a suspension would expose the Scheme to losses and delays in its ability to redeem shares of the Scheme.
- e. **Income Distribution cum Capital Withdrawal (Dividends):** The Scheme may distribute not only investment income, but also realised capital gains or capital. Where capital is distributed, this will result in a corresponding reduction in the value of shares of the Scheme, and a reduction in the potential for long-term capital growth.
- f. **Warrants:** The Scheme may invest in warrants, the values of these warrants are likely to fluctuate more than the prices of the underlying securities because of the greater volatility of warrant prices.
- g. **Futures and Options:** The Scheme may use options and futures on securities, indices and interest rates for the purpose of efficient portfolio management. Transactions in futures and options carry a high degree of risk. A relatively small market movement will have a proportionately larger impact which may work for or against the investor. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.
- h. **Listing:** In case the shares of the Scheme are listed, the exchanges on which those shares are listed will have no responsibility for the contents of any prospectus issued by the Scheme or will make no representations as to its accuracy or completeness and expressly disclaim any liability whatsoever for any kind of loss arising from or in reliance upon any part of any such prospectus.

**Other Risks:** Zero coupon or Deep Discount Bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specific date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face value. The discount depends on the time remaining until maturity and the embedded interest rate at time of issuance. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the issuer. The market rates of zero-coupon securities are generally more volatile than the market price of securities that pay interest periodically and are likely to respond to changes in interest rates to a greater degree than other coupon bearing securities having similar maturities and creditworthiness.

In the event of substantial investment by the Sponsor/s, or its associates in the Scheme, any redemption by these entities may have an impact on the performance of the Scheme (S).

Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the event of winding up of the Scheme(s) or for any amendments in the tax laws that may affect the tax benefits available under the Scheme(s). The tax benefits are based on the present laws and rules in force.

**Risks Associated with investing in Money Market Instruments:**

Investments in money market instruments would involve a moderate credit risk i.e., risk of an issuer's inability to meet the principal payments. Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, the general level of market liquidity and market perception of creditworthiness of the

issuer of such instruments. The NAV of the Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

**Risks associated with Securities Lending:**

There are risks inherent to securities lending, including the risk of failure or bankruptcy of the counter party, leading to non-compliance with the terms of the agreement by the counterparty. Such failure can result in the possible loss of rights to the collateral, the inability of the counterparty to return the securities deposited by the lender and the possible loss of any corporate benefits accruing thereon. The Mutual Fund may not be able to sell such Securities and this can lead to temporary illiquidity.

**Risks associated with investing in Tri Party Repo through CCIL (TREPS):**

All the market repo and Tri-party repo, are settled through Clearing Corporation of India Limited (CCIL). CCIL acts as a Central Counterparty (CCP) to all trades received for settlement.

Risk of exposure in the TREPS, Repos & Reverse Repos in Government Securities/Treasury Bills emanates mainly on two counts –

- a. Risk of failure by a lender to make funds available or by a borrower to provide adequate collateral security to accept the fund at the first leg of borrowing and lending under Tri-party Repo transaction or Repo transactions in Government Securities / treasury Bills.
- b. Risk of default by a borrower in repayment.

**Risk factors associated with Creation of Segregated Portfolio:**

Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer. Security comprising of segregated portfolio may not realise any value. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

**Risk Factors Associated with Investments in REITs and InvITs**

- a. **Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- b. **Liquidity Risk:** As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- c. **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- d. **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc. may differ from existing capital market asset classes under Indian Law.

**Risk associated with investment in Debt Securities with Call & Put options:**

**Prepayment Risk:** A Fixed income security with call options gives the issuer a right to call back its securities before their maturity date. This exposes the holder to Reinvestment Risk i.e. early receipt of fund may be deployed at lower interest rate than the holder was getting from the investment, which was Called. Especially, during periods of secular falling interest rates there is a higher probability the issuer may exercise this right of prepayment. Such a prepayment during falling interest rates periods may force the Scheme to reinvest the redemption proceeds in securities that are offering lower yields, thereby resulting in lower interest income.

**Default Risk:** A fixed income security with put options gives the holder to offer the securities to the issuer before their maturity date. A holder of a put table bond may decide to exercise the “put option” in case they feel that the issuer’s business and financial position is deteriorating thus jeopardizing its ability to pay off debt. In this case, the inability of the issuer to meet this early obligation, due to adverse changes in financial conditions of the issuer, economic and political conditions in general, or specific to an issuer, will increase the risk of the scheme and reduction in value either due to adverse ratings change or due to the failure and/or losses for forcibly exiting the position.

**Risk associated with investment in Debt Securities with ratings qualified as Credit Enhancements (CE):**

Ratings companies issue a rating to a security based on explicit credit enhancement given to an instrument by another entity to enhance the credit profile of the issuer. This entity is generally the parent company of the issuer. The credit enhancement could be a guarantee, shortfall undertaking, letter of comfort, etc. from the entity and could also include additional security in form of cash collateral, pledge of shares listed on stock exchanges, personal guarantee of promoters etc.

**Liquidity Risk:** Due to the credit enhanced nature of these instruments during adverse market conditions, the liquidity of these securities are much lower than similar instruments without credit enhancements. This could also lead to inability of the scheme in selling them easily and may have to incur losses due to higher impact costs for exiting such positions.

**Credit Risk:** Any weakness in the credit enhancement structure or weakness in rating of the credit enhancement provider, will have adverse credit impact of these instruments, which could reduction in value of these instruments.

**Market Risk:** Credit enhancement helps in enhancing credit profile of a structured financial transaction through provision of additional security/financial support, for covering losses on securitised assets in adverse conditions. For the debt instruments having credit enhancements backed by equity shares, they must be sufficiently covered to address the market risk. Such investments are volatile and subject to price fluctuations owing to factors impacting the underlying assets. AMC/Fund Manager’s will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.

**Risk factors associated with investments in Instruments having Special Features - Additional Tier 1 bonds (AT-1)**

**Default Risk/ Credit Risk-** This is the risk that losses will be incurred due to default by the issuer. This is also known as credit risk or default risk. This risk pertains to the risk of default of payment of principal and/or interest in the times of severe financial stress.

These instruments are issued by banks have no guarantee as these bonds are issued under Basel norms to shore up the capital of banks. If a bank’s capital dips below certain thresholds, they can skip interest payments on these bonds and even write-down their value. This makes them a lot closer in nature to equity than debt.

**Repayment date risk-** Maturity of these bonds is simply the Issuer’s right to repay the principal value on the call date. The Issuer is not bound to pay back the investors in these bonds. They may choose not to repay the principal and simply keep paying the interest.

**Interest rate risk-** Higher interest rates often follow a rise in inflation. When interest rates rise, bond prices fall and vice-versa. The effect is particularly strong for long-dated bonds. A drop in the bond’s price does make much difference in case if the bond held till maturity. However, if in case of sale of these bonds, the seller may get a lower price when interest rates rise.

**Risk on coupon servicing-** Banks as per the terms of the instruments, have discretion at all times to cancel distributions/ payment of coupons. Coupon can also be deferred (instead of being cancelled), in case paying the coupon leads to breach of capital ratios.

**Risk of write-down or conversion into equity -** As per current RBI guidelines, banks have to maintain a Common Equity Tier-1 (CET-1) ratio of minimum 5.5% of Risk Weighted Assets (RWAs), failing which the AT-1 bonds can get written down. Further, AT-1 Bonds are liable to be written down or converted to common equity, at the discretion of RBI, in the event of Point of Non Viability Trigger (PONV). PONV is a point, determined by RBI, when a bank is

deemed to have become non-viable unless there is a write off/ conversion to equity of AT-1 Bonds or a public sector capital injection happens. The write off/conversion has to occur prior to public sector injection of capital.

## **B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

The Scheme/Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/Plan. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme/Plan shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

## **C. SPECIAL CONSIDERATIONS**

- Prospective investors should study this Scheme Information Document and Statement of Additional Information carefully in its entirety and should not construe the contents hereof as advise relating to legal, taxation, financial, investment or any other matters and are advised to consult their legal, tax, financial and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming Units, before making a decision to invest / redeem / hold Units.

- The AMC, Trustees or the Mutual Fund have not authorized any person to issue any advertisement or to give any information or to make any representations, either oral or written, other than that contained in this Scheme Information Document or the Statement of Additional Information or as provided by the AMC in connection with this offering. Prospective Investors are advised not to rely upon any information or representation not incorporated in the Scheme Information Document or Statement of Additional Information or as provided by the AMC as having been authorized by the Mutual Fund, the AMC or the Trustees.
- Mutual Fund, its Trustees, AMC, its directors, its employees & Sponsors shall not be liable for any of the tax consequences that may arise, in the event that the Scheme is wound up for the reasons and in the manner provided in 'Statement of Additional Information (SAI)'.
- Redemption due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. Mutual Fund, their Trustees, AMC, its directors, its employees & Sponsors shall not be liable for any such tax consequences that may arise due to such redemptions.
- The liquidity of the Scheme's investments inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemptions or of a restructuring of the Scheme's investment portfolio, there may be delays in the redemption of units. Please refer to the section on "Right to limit repurchases".
- The value of the Scheme's investments may be affected by factors affecting capital markets generally, such as price and volume volatility in the stock markets, interest rates, currency exchange rates, foreign investments,

changes in government policy, political, economic or other developments and closure of the stock exchanges. The NAV of the Scheme will be sensitive to changes in Interest / Bank / Prime Lending Rates. In case of investment in Money Market Instruments and in Central / State Govt. Securities by the Scheme, an increase in the Interest / Bank / Prime Lending Rates will impact the market value of existing investments leading to decrease in the Scheme's NAV.

- Debt securities are subject to the risk of an issuer's inability to meet principal and interest payments on the obligations (Credit Risk). Debt securities may also be subject to price volatility due to such factors as interest sensitivity, market perception or creditworthiness of the issuer and general market liquidity (Market Risk). While it is the intention of the Investment Manager to invest primarily in highly rated debt securities, the Scheme may from time to time invest in higher yielding, lower rated securities but not below investment grade and also in un-rated securities subject to provisions and restrictions laid down by SEBI, which would enhance the degree of risk. Changes in Government Policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme.
- The NAV of the scheme may be affected by the changes in the general market conditions, factors and forces affecting capital market in particular, level of interest rates, various market related factors, settlement periods and transfer procedures. If a Unit Holder invests in the scheme and acquires a substantial portion of the scheme units, the repurchase of units by the Unit Holder may have an adverse impact on the units of the schemes because the timing of such repurchase may impact the ability of other Unit holders to repurchase their units.
- The tax benefits described in this SID and SAI are as available under the present taxation laws and are available subject to relevant conditions. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India as on the date of this Scheme Information Document and the Unit holders Investors should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor is advised to consult his/her own professional tax advisor.
- The AMC and/ or its Registrars & Transfer Agent (RTA) reserve the right to disclose/share Unit holder's details of folio(s) and transaction details there under with the following third parties:
  - a) RTA, Banks and/or authorized external third parties who are involved in transaction processing, dispatching etc., of the Unitholder's investment in the Scheme;
  - b) Distributors or sub-brokers through whom the applications are received for the Scheme;
  - c) Any other organizations for compliance with any legal or regulatory requirements or to verify the identity of the Unitholders for complying with anti-money laundering requirements.
- The AMC may consider the overall level of risk of the portfolio; invest in lower rated / un-rated securities, offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute risk of the portfolio.
- Any disruption in the normal functioning of the Debt market or extreme illiquidity in any one of the Scheme's Securities, may affect the ability of The Fund Manager to buy or sell freely in the market. In the event of a large number of repurchase requests, the time taken by the Scheme to full fill the repurchase requirements may become significant.
- It may be noted that no prior intimation/indication would be given to investors when the composition asset allocation pattern of the Scheme undergo changes within the permitted band as mentioned in this document. In the event of a large number of repurchase requests, the time taken by the Scheme to full fill the repurchase requirements may become significant.

Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the

event of winding up of the Scheme or for any amendment in tax laws that may affect the tax benefits available under the Scheme. The tax benefits are based on the present laws and rules in force.

### **Debt and Money Markets in India**

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market is the oldest and the largest component (70% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by government of India (GOI)). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call (i.e. market for overnight and term money between banks and institutions)
- Tri-party repo (TREPS)
- Repo/Reverse Repo Agreement (temporary sale with an agreement to buy back the securities at a future date at a specified price)

- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / Financial Institution / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest spreads over similar maturity sovereign papers, on the back of comfort of majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields prevailing as on 30<sup>th</sup> June, 2022 some of the instruments:

<b>Instrument</b>	<b>Current Yield Range</b>
TREPS	4.60%-5.02%
Repo	0.01%-4.85%
3m Tbill	5.12%
1y Tbill	6.21%
10y G Sec	7.45%
3m PSU Bank CD	5.13%-5.23%
3m NBFC CP	5.45%-5.55%
3m Non NBFC CP	5.28%-5.38%
1y PSU Bank CD	6.50%
1y NBFC CP	6.75%
1y Non NBFC CP	6.60%
5y AAA Institutional Bond (PSU Bond)	7.47%-7.51%
10y AAA Institutional Bond (PSU Bond)	7.78%-7.81%

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

**E. WHAT ARE THE INVESTMENT STRATEGIES?**

**Investment Strategy:**

**Investment Strategy**

Being an open-ended debt scheme, the fund would predominantly invest in debt and money market instruments of banks, public sector undertakings, public financial institutions and Municipal Bonds. The scheme will follow an active interest rate management strategy and aim to generate income and/or capital appreciation through a portfolio of high-quality debt and money market instruments consisting predominantly of securities issued by entities such as Banks, Public Sector Undertakings (PSUs) and Public Financial Institutions (PFIs) and Municipal Bonds. Investments in central and state government may be undertaken for active duration management.

Performance will depend on the Asset Management Company's ability to assess accurately and react to general market conditions and changing financial characteristics of the security issuers. The general maturity/Macaulay Duration range for the portfolio in relation to the market based on its interest rate outlook will be arrived at after a

rigorous and close monitoring of various macro variables. The shifts within this range are then determined by short term cyclical trends in the economy. Depending upon prevailing market conditions & interest rate scenario, the portfolio Macaulay Duration and average maturity can be increased or decreased. In case of a rising interest rate environment the Macaulay Duration/average maturity of the scheme may be reduced whereas in a falling interest rate scenario the holding in medium / long securities may be maximized.

The Investment Manager will actively monitor the prevailing political conditions, economic environment (including interest rates and inflation etc.), performance of the corporate sector and general liquidity as well as other considerations in the economy & markets to assess the likely direction of interest rates and to position the portfolio appropriately to take advantage of the same. It is the responsibility of the AMC to seek to ensure that the investments are made as per the Regulatory guidelines, the investment objective of the Scheme and in the interest of the Unit holders of the Scheme.

The AMC will keep a record of all investment decisions in accordance with the guidelines issued by SEBI. The AMC and Trustees will review the performance of the scheme in their Board meetings. The performance measurement would be against the benchmark index as well with the peer group in the industry.

### **Investment Pattern and changes**

Please refer to sub - section C 'How will the Scheme Allocate its Assets?' under the section II 'Information about the Scheme'.

The term Investment pattern is defined as the tentative portfolio break-up of Debt, Money Market Instruments, other permitted securities and such other securities as may be permitted by the Board from time to time with minimum and maximum asset allocation, while retaining the option to alter the asset allocation for a short-term period on defensive considerations.

Under normal circumstances, the investment pattern outlined in section C shall always prevail. However, it is to be noted that the investment pattern mentioned above is only indicative and may be changed by the Investment Manager for defensive considerations subject to portfolio rebalancing clause and in accordance with SEBI circular no. SEBI/HO/IMD/IMD-II DOF3/P/CIR/2022/39 dated March 30, 2022 updated from time to time.

### **Risk Mitigation:**

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in portfolio construction process. Security specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the AMC.

Through adequate diversification of the portfolio, the AMC tries to reduce the risk. Diversification will also be achieved by spreading the investments over a diverse range of industries / sectors. However, if the case merits, the Scheme may invest in such securities adhering to prudential norms on a case to case basis. The investments may be made in primary as well as secondary markets and the portfolio will be adequately diversified.

The Scheme being open ended, some portion of the portfolio may be invested in Money Market Instruments so as to meet the normal repurchase requirements. The remaining investment will be made in securities which are either expected to be reasonably liquid or of varying maturity. However, the NAV of the Scheme may be affected, if the securities invested in are rendered illiquid after investment.

In addition, the Investment Manager will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The Investment Manager would use this analysis to assess the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

The Scheme may use derivatives instruments like Stock/ Index Futures or Options, Interest Rate Futures, Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging or portfolio balancing or any other purpose as allowed under the regulations, within the permissible limit of the portfolio, which may be increased as permitted under the Regulations and guidelines from time to time.

Liquidity, ex-ante tracking error, VaR and Limits on sectoral and scrip exposures will be monitored on an ongoing basis to ensure that they are all within the defined regulatory/internal limits. Monthly scenario analysis will be done on the portfolio and results shall be shared with the investment team for them to take suitable action, if deemed necessary. In addition the scheme's performance vis-a-vis the benchmark will also be reviewed by the investment committee.

As a prudent measure, the AMC has broad internal investment norms and investments made through the scheme would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations.

**Debt Securities:**

Concentration of risk is mitigated by defining issuer limits. Rigorous in-depth credit evaluation of the issuers will be conducted by the investment team before making investments. As part of credit evaluation, a study on the operating environment, past track record as well as future prospects of the issuer, short as well as long term financial health of the issuer will be carried out. The AMC will be guided by the ratings of accredited agencies such as CRISIL, CARE, ICRA etc. as well as the internal norms for credit exposure. Investments made by the schemes would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations. Since investing required disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, the investment team of the AMC will carry out rigorous in-depth analysis of the securities proposed to be invested in. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

**Procedure followed for investment decisions:**

The Fund Manager of the Scheme is responsible for making buy / sell decisions for the Scheme's portfolio and seeks to develop a well-diversified portfolio taking into account the asset allocation patterns of the scheme along with risks that are associated with such investments. The investment decisions are made on an ongoing basis keeping in view the market conditions and other regulatory aspects.

The Fund Manager is responsible for facilitating investment debate and a robust investment culture. The investment team would hold ongoing meetings as well as additional ad-hoc meetings as needed, to explore the investment thesis.

The AMC has constituted an Investment Committee, currently comprising of the CEO, COO, Head of Risk Management, Head of Equities, Head of Fixed Income that meets at periodic intervals. The Investment Committee's role is to formulate broad investment strategies for the Scheme, review the performance of the Scheme and the general market outlook.

It is the responsibility of the AMC to seek to ensure that the investments are made as per the Regulatory guidelines, the investment objective of the Scheme and in the interest of the Unit holders of the Scheme.

The AMC will keep a record of all investment decisions in accordance with the guidelines issued by SEBI.

The AMC and Trustees will review the performance of the scheme in their Board meetings. The performance would be compared with the performance of the benchmark index and with peer group in the industry.

**Portfolio Turnover:**

The Scheme is an open-ended Scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

**F. FUNDAMENTAL ATTRIBUTES**

The Fundamental Attributes of the scheme are as mentioned under, in terms of Regulation 18 (15A) of the SEBI (MF) Regulations:

**(i) Type of a scheme**

- The investment pattern is as set out in Section II, Paragraph C of this SID with the option to alter the asset allocation for a short term period on defensive considerations

However, any permanent change in the positioning of a Scheme into a cell resulting in a risk (in terms of credit risk or duration risk) which is higher than the maximum risk specified for the chosen PRC cell, shall be considered as a fundamental attribute change of the Scheme in terms of Regulation 18(15A) of SEBI (Mutual Fund) Regulations, 1996.

The Mutual Fund shall inform the unitholders about subsequent changes, if any, in the PRC through SMS and by providing a link on the website referring to the said change.

However, the PRC value of a Scheme could change temporarily due to price movements, rating changes, investment actions, etc. Any such temporary change in the PRC cell of a scheme to a higher risk scale for either credit risk or duration risk beyond the maximum risk specified for the chosen PRC cell shall be subject to rebalancing in terms of provisions specified in the SID.

**(iii) Terms of Issue**

<p><b>Mandatory Swing Pricing Framework for market dislocation:</b></p> <p>With a view of safeguarding the interest of small investors against any large redemptions, SEBI vide its circular SEBI/HO/IMD/IMD-II DOF3/P/CIR/2021/631 dated September 29, 2021 introduced provisions pertaining to Swing Pricing Framework for open ended debt schemes (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) with effect from <b>May 01, 2022</b>.</p> <p>In view of the provisions mentioned in aforesaid circular, a mandatory full swing pricing framework, during market dislocation times (as and when declared by SEBI), is being introduced in all open ended debt schemes of Canara Robeco Mutual Fund (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) as given below:</p> <p><b>Meaning of Swing Pricing:</b></p> <p>Swing pricing refers to a process for adjusting a fund's Net Asset Value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity during the life of a fund, excluding ramp-up period or termination. In other words, Swing Pricing is an anti-dilution technique which helps funds manage liquidity risks internally by effectively passing on transaction costs to the unitholder/investors associated with that activity. In a liquidity-challenged environment, quoted bid/ask spreads and overall trading cost can widen and may not be representative of the executed prices that can be achieved in the</p>																																																																													

market. In such circumstances, swing pricing can be a useful mechanism to contribute to protect the interests of existing investors, specifically from the dilution of their holdings; and contribute to protect the value of the investors capital.

**Applicability of Swing Pricing Framework:**

The swing pricing framework will be made applicable only for scenarios related to net outflows from the debt schemes.

SEBI will determine ‘market dislocation’ either based on AMFI’s recommendation or suo moto. Once market dislocation is declared, it will be notified by SEBI that swing pricing will be applicable for a specified period.

Subsequent to the announcement of market dislocation, the swing pricing framework shall be mandated only for open ended debt schemes which:

1. Have “High” or “Very High” risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation) and
2. Potential Risk Class (PRC) cells A-III, B-II, B-III, C-I, C-II and C-III

**Minimum swing factor for open ended debt schemes:**

Following mandatory swing factor will be applied on redemption and subscription transactions in the above mentioned schemes during market dislocation period announced by SEBI.

<b>Minimum swing factor for open ended debt schemes</b>			
<b>Credit Risk of scheme →</b>	<b>Class A (CRV*≥12)</b>	<b>Class B (CRV≥10)</b>	<b>Class C (CRV&lt;10)</b>
<b>Interest Rate Risk of scheme ↓</b>			
<b>Class I: (MD≤1 year)</b>	Nil	Nil	1.50%
<b>Class II: (MD≤3 years)</b>	Nil	1.25%	1.75%
<b>Class III: Any Macaulay Duration (MD)</b>	1.00%	1.50%	2.00%

\*CRV: Credit Risk Value

**Applicability of Swing Pricing to Investors:**

When swing pricing mechanism is triggered and swing factor is made applicable during market dislocation, both the incoming and outgoing investors shall get NAV adjusted for swing factor. Swing pricing shall be made applicable to all unitholders at PAN level, with an exemption for redemptions up to Rs. 2 lakhs for each mutual fund scheme for market dislocation.

**D. Computation of NAV**

The computation of NAV, valuation of securities / assets, accounting policies and standards would be in conformity with the SEBI (Mutual Funds) Regulations, 1996 and guidelines issued from time to time. The NAV per unit shall be calculated as follows:

$\frac{\text{Market or Fair Value of Scheme's investments} + \text{Current assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}} = \text{NAV (Rs.)}$
---

The price arrived shall be rounded off up to two decimals.

**An Illustration:**

Assume that the Market or Fair Value of Scheme’s investments is Rs. 1,00,00,000; Current asset of the scheme is Rs.25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the scheme are 5,00,000.

Thus, the NAV will be calculated as:

$$\text{NAV} = \frac{1,00,00,000 + 25,00,000 - 15,00,000}{5,00,000}$$

Therefore, the NAV of the scheme is Rs. 22.0000

**E. COMPUTATION OF SALE PRICE**

Since the fund do not charge any Entry Load, the Purchase price or “Sale Price” is same as NAV of the fund disclosed on daily basis. Therefore, entry load, if any shall be charged as a percentage of Net Assets Value (NAV) for calculating Sale Price i.e. applicable Entry Load (if any) as a percentage of NAV will be added to NAV to calculate “Sale Price”. In other words, the following formulae shall be used:

$$\text{SALE PRICE} = \text{Applicable NAV} \times (1 + \text{Entry Load, if any})$$

**An Illustration:**

An investor invests Rs. 20,000/- and the current NAV is Rs.20/-. The entry load levied by the scheme is Nil i.e., 0%. Therefore, Sale price at which the investor invests = Rs.20.00 \*(1 + 0%) = Rs.20.00.

**F. COMPUTATION OF REPURCHASE PRICE**

For calculating the Repurchase Price, exit load charged to the scheme is subtracted i.e., applicable Exit Loads as a percentage of NAV will be subtracted from NAV to calculate Repurchase Price. The formula for calculation of Repurchase Price would be:

$$\text{REPURCHASE PRICE} = \text{Applicable NAV} \times (1 - \text{Exit Load, if any})$$

**An Illustration:**

An investor invests Rs. 20,000/- and the current NAV is Rs.20/-. The exit load levied by the scheme is 1.0% if redeemed/switched within 1 year from the date of allotment.

Therefore, the Repurchase Price will be = Rs.20.00 \*(1 – 1.0%) = Rs.19.80.

Notes:

1. It is assumed in the above illustration that the Investor redeems his investments within the applicable exit load period. No exit load will be levied after the completion of period of applicable exit load.
2. Different Schemes may have different exit load structures. Investors are requested to refer the Scheme documents / AMC website to know the latest exit load structures

**IV. FEES AND EXPENSES**

This section outlines the expenses that will be charged to the schemes:

**A. NEW FUND OFFER (NFO) EXPENSES**

These expenses are incurred for the purpose of various activities related to the NFO like sales and distribution fees paid marketing and advertising, registrar expenses, printing and stationary, bank charges etc. These expenses will be borne by the AMC and not by the scheme of mutual fund.

**B. ANNUAL SCHEME RECURRING EXPENSES**

These are the fees and expenses for operating the scheme. These expenses include Investment Management and Advisory Fee charged by the AMC, Registrar and Transfer Agents’ fee, marketing and selling costs etc. as given in the table below:
